

Infinova Previews a 30 FPS 2 Megapixel Continuous Rotation PTZ Dome Camera with very high quality video at ASIS 2009

A new hybrid camera in Infinova's megapixel family featuring a 10x optical zoom and a 12x digital zoom that is easy for Security Integrators to install in IP and analog surveillance solutions.

ASIS 2009, Anaheim, Calif., Sept. 22, 2009 —Infinova previews the V1770 HD 360° Continuous Rotation Megapixel IP PTZ Dome Camera with 2.0 megapixel resolution. The new camera is a member of Infinova's hybrid family of IP PTZ Dome cameras that delivers high-definition video output as both an IP and an analog YPbPr signal. Designed for demanding surveillance applications where Security Integrators need very high quality video as well as the flexibility of a continuous rotation dome camera. The V1770 delivers 30 FPS with a 10x optical zoom and a 12x digital zoom.

"360° continuous pan cameras are vital tools for flexible surveillance coverage. A camera that gives reliable, higher megapixel images is a major advantage for Security Integrators in malls, airports etc.," said Mark S. Wilson, Vice President, Marketing, Infinova.

The V1770 gives security operators real-time PTZ control of the camera without lag, this is vital when the camera is being used to follow a suspect in a building for example. To improve operational reliability the camera has a built-in clock that automatically synchronizes the camera's time-stamp with the management system. Security Operators can also monitor the internal temperature, voltage and fan status giving them an advanced warning should the camera require maintenance.

"The V1770 is our latest PTZ dome camera for specialist surveillance which is why we are previewing it at ASIS 2009. However Infinova has a long tradition of innovative PTZ cameras for specialist applications, such as our explosion-proof PTZ camera and our integrated IP PTZ camera transport systems." said Dr. Jeffrey Liu, President, Infinova.
