KeyTrak to attend ASIS International's Annual Seminar and Exhibit

KeyTrak is pleased to announce that we will be exhibiting at ASIS International's 55th Annual Seminar and Exhibits from September 21-24 in Anaheim, California. Our team will be stationed at booth #3215, where we will be displaying two of our KeyTrak Guardian systems and one GEM secure drawer system.

The KeyTrak Guardian systems will be 40-key panel/secure locker systems, and will have our latest software installed – version 8.0. New to the system this year is a motion-activated security camera. This discreetly mounted camera records all panel activity and saves the video files. These files can be viewed at any time at the Guardian panel or remotely through our Web Access application.

As soon as someone approaches the Guardian panel the camera begins recording. Once the person logs in to the system the video that is being recorded is stored in a location for transaction activity, which includes all activities related to checking in or out and any alarm activity. If they do not log in to the system, the camera still records their activity – it is just stored in a separate location designated for non-transaction activity.

If someone checks a key out, and does not return it, you will have a video record of it. If someone triggers an alarm, you will have a video record of it. If someone attempts to physically damage the panel or break into the panel, you will have a video record of it. No matter what your employees are doing KeyTrak Guardian will have a video record of it.

Combining the reliability of the panel with a vigil eye completes our most secure Guardian system to date. You can rest easy knowing that your keys and assets are always being watched and tracked.

The KeyTrak drawer system will also be outfitted with the 8.0 software and will include our new Package Tracking feature. PackageTrak™ is a full featured package tracking solution that gives your property a verifiable audit trail when handling deliveries for tenants and occupants. Its extensive reporting features will reduce your property's liability, and its user-friendly interface will increase the efficiency of your front desk operations.

PackageTrak™ utilizes a barcode scanner, which your staff will use to scan the shipping label of the package they receive. Once the package is scanned, a notification message is generated. This message can be printed or emailed to the recipient. When the recipient picks up the package, PackageTrak™ can print a receipt for them to sign, or you can use the signature pad to capture the recipient's signature electronically.

PackageTrak™ creates reports that show all activities associated with the packages while you are going through these steps. These reports allow your staff to track packages from the moment they are received until they reach the intended recipients. PackageTrak™ ensures that the correct person receives the correct package.

About KeyTrak:

KeyTrak is the world's leading provider of key and asset tracking systems. KeyTrak helps businesses enhance the security of their operations while improving productivity and reducing costs. KeyTrak systems provide a safe, organized way to house keys for car dealerships, apartment communities, hospitals, military bases, government facilities, hotels, schools, and commercial properties.

The KeyTrak, KeySafe and Guardian systems are built in a state-of-the-art manufacturing facility located in College Station, Texas. KeyTrak's superior software support team is available 24 hours a day, 7 days a week.
