

Tridium Releases Enterprise Security, a Modular, Highly Scaleable Security Management and Access Control Solution

Visit Tridium at ASIS International Booth 1319

RICHMOND, VIRGINIA , July 27, 2009--Tridium today announced the release of its new Enterprise Security solution, a comprehensive access control and security management solution, built on a truly open, IP based platform.

Breaking from traditional security offerings, Tridium's Enterprise Security leverages the proven technology of the Niagara^{AX} Framework to provide a world-class solution for a range of security applications. Enterprise Security provides unparalleled interoperability not only within traditional security environments, but also extends seamlessly to create a unified, intelligent building by integrating with today's diverse facility systems including environmental controls, lighting, energy management, fire and video.

Enterprise Security provides scalability ranging from single door solutions to multi-building/multi-campus deployments. Entirely accessible from any standard web browser, the solution provides flexible anytime, anywhere access into the system while liberating end users from dedicated client workstations in the traditional client /server model.

With Niagara deployed worldwide, the core architecture of Enterprise Security is proven and designed to solve the complexities of integrating disparate systems in real world scenarios. Enterprise Security is open – open architecture, open framework and support for open protocols.

"We are very excited with the release of our Enterprise Security solution," said Marc Petock, Vice President Global Marketing & Communications for Tridium. "Coupled with its ease of use, standard browser interface, and powerful Niagara Framework engine, Enterprise Security meets the ever-changing security requirements of a constantly changing world."

About Tridium

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The Niagara Framework® is a software platform that integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. By integrating today's diverse building systems such as environmental controls, security, lighting, energy, video, fire and life safety, Niagara is creating better buildings---ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment

The Sedona Framework™ is the industry's first, open source development framework that provides a complete software platform for developing, deploying, integrating, and managing pervasive device applications at the lowest level. It brings the power of programmable control and the Internet down to extremely inexpensive devices. The Sedona Framework distributes decision

making control and manageability to any device and brings intelligence and connectivity to the network edge and back.

The company is an independent business entity of Honeywell International Inc.
