

DRAFT NATIONAL CYBER INCIDENT RESPONSE PLAN

SEPTEMBER 30, 2016

Attached for your review is the working draft of the National Cyber Incident Response Plan (NCIRP). The updated plan will formalize the incident response practices that have been developed over the past few years and will in further detail clarify organizational roles, responsibilities, and actions to prepare for, respond to, and coordinate the recovery from a significant cyber incident. This plan will build upon the Presidential Policy Directive (PPD)-41: *U.S. Cyber Incident Coordination* and include the private sector and other levels of government.

As part of a National Engagement Period, this draft of the NCIRP containing proposed updates is being widely distributed for review and feedback. This is a draft document, and we feel it is important to seek your input at this critical juncture.

This update to the NCIRP focuses on discrete, critical content revisions. The proposed changes in the attached draft are the result of the public and private sector input to this point. While the NCIRP focuses on cyber incident response efforts, the National Preparedness System outlines a broader architecture that establishes how the whole community prevents, protects against, mitigates, responds to, and recovers from all threats and hazards. The revisions also draw from lessons learned during the development of the Interim NCIRP, National Planning Frameworks, and Federal Interagency Operational Plans, as well as large scale cyber exercises such as the Cyber Storm series and the National Level Exercise 2012.

To ensure all feedback is properly handled, please use the provided feedback submission form located at <https://www.us-cert.gov/ncirp> to submit feedback and recommendations. Please provide any comments and recommendations, using the submission form, to FEMA-NCIRP-engagement@fema.dhs.gov by **Monday, October 31 at 5:00pm EST**.

Feedback supports the development of the second edition of the NCIRP for official government approval per PPD-41. Please distribute the draft to any applicable partners, stakeholders, or individuals.

We look forward to receiving your feedback, and thank you for your continued contributions on this important endeavor.

V/R,

Department of Homeland Security

96 Introduction

97 The *National Cybersecurity Protection Act of 2014* (NCPA)¹ mandates that “the Department of
98 Homeland Security (DHS) in coordination with appropriate entities and individuals, develop,
99 regularly update, maintain, and exercise adaptable cyber incident response plans to address
100 cybersecurity risks to critical infrastructure.” Presidential Policy Directive (PPD)-41: *U.S. Cyber
101 Incident Coordination*,² sets forth principles governing the Federal Government’s response to any
102 cyber incident, provides an architecture for coordinating the response to significant cyber incidents,
103 and requires DHS to develop a National Cyber Incident Response Plan (NCIRP) to address
104 cybersecurity risks to critical infrastructure. The NCIRP is part of the broader National Preparedness
105 System and establishes the strategic framework and doctrine for a whole community approach to
106 mitigating, responding to, and recovering from a cyber incident. This whole-of-Nation approach
107 includes and strongly relies on public and private partnerships to address major cybersecurity risks to
108 critical infrastructure.

- 109 ▪ Response Plan Purpose and Organization – The NCIRP provides guidance to enable a
110 coordinated whole-of-Nation approach to response activities and coordination with stakeholders
111 during a significant cyber incident impacting critical infrastructure. The NCIRP sets common
112 doctrine and a strategic framework for National, sector, and individual organization cyber
113 operational plans.
- 114 ▪ Intended Audience – The NCIRP is intended to be used by the Nation as well as enhance our
115 international partners’ understanding of the U.S. cyber incident coordination framework. This all-
116 inclusive concept focuses efforts and enables the full range of stakeholders—individuals, the
117 private and nonprofit sectors (including private and public owners and operators of
118 infrastructure), state, local, tribal, territorial (SLTT) governments, and the Federal Government—
119 to participate and be full partners in incident response activities. Government resources alone
120 cannot meet all the needs of those affected by significant cyber incidents. All elements of the
121 community must be activated, engaged, and integrated to respond to a significant cyber incident.

122 Scope

123 Cyber incident response is an important component of information and communications technology
124 (ICT) and operational technology programs and systems. Performing incident response effectively is
125 a complex undertaking and requires substantial planning and resources to establish a successful
126 incident response capability.

127 The NCIRP is the strategic framework for operational coordination among Federal and SLTT
128 governments, the private sector, and international partners. Developed according to the guiding
129 principles outlined in PPD-41 and leveraging doctrine from the National Preparedness System and
130 the National Incident Management System (NIMS),³ the NCIRP sets the strategic framework for how
131 the Nation plans, prepares for, and responds to cyber incidents by establishing an architecture for
132 coordinating the broader whole community response during a significant cyber incident in
133 accordance with U.S. law and policy. A comprehensive list of authorities is found in Annex A:
134 Authorities and Statutes. The NCIRP is also designed to integrate and interface with industry

³ NIMS. <http://www.fema.gov/national-incident-management-system>.

135 standards and best practices for cybersecurity risk management, as developed by the National
136 Institute of Standards and Technology's (NIST) Framework for Improving Critical Infrastructure
137 Cybersecurity.⁴

138 The NCIRP is not a tactical or operational plan for responding to cyber incidents. However, it should
139 serve as the primary strategic framework for stakeholders when developing agency-, sector-, and
140 organization-specific operational plans. This common doctrine will foster unity of effort for
141 emergency operations planning and will help those affected by cyber incidents understand how
142 Federal departments and agencies and other national-level partners provide resources to support
143 SLTT and private sector response operations. This Plan should serve as the basis for national cyber
144 operational playbooks and individual critical infrastructure sector operational coordination plans, as
145 well as at the individual entity level. In all cases, incident response activities will be conducted in
146 accordance with applicable law and policy.

147 ***Guiding Principles***

148 The NCIRP is based on several guiding principles outlined in PPD-41 for the response to any cyber
149 incident, whether involving government or private sector entities. These principles include:

- 150 ▪ **Shared Responsibility**. Individuals, the private sector, and government agencies have a shared
151 vital interest and complementary roles and responsibilities in protecting the Nation from
152 malicious cyber activity and managing cyber incidents and their consequences.
- 153 ▪ **Risk-Based Response**. The Federal Government will determine its response actions and the
154 resources it brings to bear based on an assessment of the risks posed to an entity, our national
155 security, foreign relations, the broader economy, public confidence, privacy of individuals' civil
156 liberties, or the public health and safety of the American people. Critical infrastructure entities
157 also conduct risk-based response calculations during cyber incidents to ensure the most effective
158 and efficient utilization of resources and capabilities.
- 159 ▪ **Respecting Affected Entities**. To the extent permitted under law, Federal Government responders
160 will safeguard details of the incident, as well as privacy, civil liberties, and sensitive private
161 sector information, and generally will defer to affected entities in notifying other affected private
162 sector entities and the public. In the event of a significant incident where Federal Government
163 interest is served by issuing a public statement concerning an incident, Federal responders will
164 coordinate their approach with the affected entities to the extent possible.
- 165 ▪ **Unity of Governmental Effort**. Various government entities possess different roles,
166 responsibilities, authorities, and capabilities that can all be brought to bear on cyber incidents.
167 These entities must coordinate efforts to achieve optimal results. The first Federal agency to
168 become aware of a cyber incident will rapidly notify other relevant Federal agencies to facilitate
169 a unified Federal response and ensure that the right combination of agencies responds to a
170 particular incident. When responding to a cyber incident in the private sector, unity of effort
171 synchronizes the overall Federal response, which prevents gaps in service and duplicative efforts.
172 SLTT governments also have responsibilities, authorities, capabilities, and resources that can be
173 used to respond to a cyber incident; therefore, the Federal Government must be prepared to
174 partner with SLTT governments in its cyber incident response efforts. The transnational nature of

⁴ Framework for Improving Critical Infrastructure Cybersecurity, version 1.0. National Institute of Standards and Technology, February 12, 2014. <https://www.nist.gov/sites/default/files/documents/cyberframework/cybersecurity-framework-021214.pdf>.

175 the internet and communications infrastructure requires the U.S. to coordinate with international
 176 partners, as appropriate, in managing cyber incidents.

- 177 ▪ **Enabling Restoration and Recovery.** Federal response activities will be conducted in a manner to
 178 facilitate restoration and recovery of an entity that has experienced a cyber incident, balancing
 179 investigative and national security requirements, public health and safety, and the need to return
 180 to normal operations as quickly as possible.

181 While steady-state activities and the development of a common operational picture are key
 182 components of the NCIRP, the Plan focuses on building the mechanisms needed to respond to a
 183 significant cyber incident. Table 1 below describes the difference between a “cyber incident” and a
 184 “significant cyber incident” as outlined in PPD-41. The Federal Government uses the Cyber Incident
 185 Severity Schema (detailed in Annex B: Cyber Incident Severity Schema) to describe the incident
 186 level and coordination to aid in determining the severity of an incident and the threshold for
 187 designating a significant cyber incident.

188 **Table 1: Cyber Incident Definitions from PPD-41**

Incident	Definition
Cyber Incident	An event occurring on or conducted through a computer network that actually or imminently jeopardizes the confidentiality, integrity, or availability of computers, information or communications systems or networks, physical or virtual infrastructure controlled by computers or information systems, or information resident thereon.
Significant Cyber Incident	A cyber incident that is (or group of related cyber incidents that together are) likely to result in demonstrable harm to the national security interests, foreign relations, or economy of the United States or to the public confidence, civil liberties, or public health and safety of the American people.

189

190 Relationship to National Planning Frameworks

191 While the NCIRP focuses on cyber incident response efforts, the National Preparedness System
 192 outlines a broader architecture that establishes how the whole community prevents, protects against,
 193 mitigates, responds to, and recovers from all threats and hazards. Specifically, the National Response
 194 Framework (NRF)⁵ sets the doctrine and provides guidance for how the Nation builds, sustains, and
 195 delivers the response core capabilities identified in the National Preparedness Goal.⁶ The NCIRP
 196 leverages the doctrine, capabilities, and organizing structures of the NRF, and both the NRF and
 197 NCIRP structures align with NIMS as described below.

198 NIMS provides the incident management structure for the NRF and NCIRP and defines standard
 199 command and management structures. Successful response efforts, including cyber incident
 200 responses, depend on a common, interoperable approach for sharing resources, coordination, and
 201 communicating information. NIMS defines this comprehensive approach and enables the whole
 202 community to work together to prevent, protect against, mitigate, respond to, and recover from the
 203 effects of incidents regardless of cause, size, location, or complexity.

⁵ The NRF is one of five frameworks in the National Preparedness System; it describes how the whole community works together to achieve the National Preparedness Goal within the Response mission area.

<http://www.fema.gov/national-response-framework>.

⁶ <http://www.fema.gov/national-preparedness-goal>.

204 All of the components of the NIMS—resource management, management and coordination, and
205 communications and information management—provide a common framework by which
206 jurisdictions and organizations, which vary in authorities, management structures, communication
207 capabilities, and protocols, integrate with one another to achieve common goals. These concepts are
208 essential to cyber incident response, in that they address:

- 209 ▪ The development of a single set of incident objectives;
- 210 ▪ The use of a collective, strategic approach to incident management;
- 211 ▪ The improvement of information flow and coordination;
- 212 ▪ The creation of a common understanding of joint priorities and limitations;
- 213 ▪ The assurance that no agency’s legal authorities are compromised or neglected; and
- 214 ▪ The optimization of the combined efforts of all participants in the incident.

215 The NRF also includes 14 Emergency Support Functions (ESF)⁷; these Federal coordinating
216 structures group resources and capabilities into functional areas that are most frequently needed in a
217 national response. ESFs are an effective way to bundle and manage resources to deliver the core
218 capabilities outlined in the NRF. These ESFs bring together the capabilities of Federal departments
219 and agencies and other national-level assets to support incident response. The ESFs are not based on
220 the capabilities of any single department or agency, but are groups of organizations that work
221 together to support an effective response.

222 Activation of the ESFs, either by the DHS Federal Emergency Management Agency (FEMA) or as
223 directed by the Secretary of Homeland Security, depends upon the response activities needed to
224 support the incident. Specifically, through ESF #2 (Communications), the Government can
225 coordinate the response to and recovery from a cyber incident that also creates large-scale physical
226 effects with the communications sector and across the other ESFs. In an incident with cyber and
227 physical effects, the significant cyber incident response mechanism outlined in the Coordinating
228 Structures and Integration section of this Plan will coordinate with the established ESFs, to include
229 ESF #2.

230 The NRF describes the roles and responsibilities of the whole community and all partners involved
231 within the Response mission area. Those response roles and responsibilities also apply to cyber
232 incidents. Consistent with those roles and responsibilities, the next section describes the concurrent
233 lines of effort and identifies key roles and responsibilities relevant within each line of effort for
234 responding to a cyber incident.

235 **Roles and Responsibilities**

236 Every day, various organizations across the public and private sectors manage, respond to, and
237 investigate cyber incidents through concurrent lines of effort. Fostering unity of effort during
238 incident response requires a shared understanding of the roles and responsibilities of all participating
239 organizations, to include roles that may be unique or particularly relevant for protecting the Nation
240 from malicious cyber activity and managing cyber incidents and their consequences.

241 The Federal Government maintains a wide range of capabilities and resources that may be required to
242 respond to a cyber incident, many of them through its cybersecurity centers which are further
243 described in Annex D: Roles of Federal Centers. In responding to any cyber incident, Federal

⁷ <http://www.fema.gov/national-preparedness-resource-library>.

244 agencies undertake four concurrent lines of effort: threat response, asset response, intelligence and
245 related activities, and the affected entity's internal response efforts (if applicable).

246 For many cyber incidents, the Federal Government will not play a direct role in the affected entity's
247 response efforts. Where possible, and especially where incidents involve critical infrastructure or
248 may escalate on the Cyber Incident Severity Schema, the Federal Government will conduct outreach
249 efforts with the affected entity and offer to assist with response activities, consistent with the guiding
250 principles described in the Scope section of this Plan.

251 ***Concurrent Lines of Effort***

252 Recognizing the shared responsibility for cybersecurity, response activities in the NCIRP are
253 undertaken through four concurrent lines of effort: threat response, asset response, intelligence
254 support and related activities, and the affected entity's response efforts.⁸ These concurrent lines of
255 effort provide a foundation for harmonizing various response efforts and fostering coordination and
256 unity of effort before, during, and after any cyber incident response. Federal and non-Federal entities
257 should remain cognizant of these lines of effort and facilitate their activities accordingly while
258 responding to cyber incidents. Critical asset response activities also include assessing potential risks
259 to a sector or region, including potential cascading effects; developing courses of action to mitigate
260 these risks; and providing guidance on how best to utilize Federal resources and capabilities in a
261 timely, effective manner.

262 Threat and asset responders share some responsibilities and activities, including but not limited to:

- 263 ▪ Communicating with the affected entity to understand the nature of the cyber incident;
- 264 ▪ Providing guidance to the affected entity on available resources and capabilities;
- 265 ▪ Promptly disseminating, through appropriate channels, intelligence and information learned in
266 the course of the response; and
- 267 ▪ Facilitating information sharing and operational coordination with other entities.

268 International coordination plays a key role through all the lines of effort. Due to the transnational
269 nature of the internet and communications infrastructure, and the global presence and connectivity of
270 the U.S. private sector, the Federal Government may coordinate with international partners in
271 response to all aspects of a cyber incident—threat response, asset response, and intelligence support.

272 The Department of State (DOS) represents the U.S. in all global diplomatic engagements across the
273 full range of international policy imperatives, including cyber issues. As stated in the 2011
274 International Strategy for Cyberspace, diplomacy is a vital and necessary component to addressing
275 cyber threats and responding to cyber incidents both domestically and internationally. DOS leverages
276 its diplomats in the embassies and posts around the globe to provide international diplomatic support
277 for cyber incident response around the clock. While DOS coordinates diplomatic outreach related to
278 cyber incidents, other Federal departments and agencies, including the DHS, the Department of
279 Defense (DoD), and the Department of Justice (DOJ), maintain active multilateral and bilateral
280 partnerships. Similarly, many ICT sector businesses and providers are multinational businesses with
281 critical international elements and relationships, including interaction with both policy and
282 operational communities around the world. As appropriate, Federal departments and agencies
283 collaborate internationally and with private sector entities to support international aspects of cyber
284 incident response.

⁸ PPD-41: U.S. Cyber Incident Coordination. <https://www.whitehouse.gov/the-press-office/2016/07/26/presidential-policy-directive-united-states-cyber-incident>

285 **Threat Response**

286 Threat response activities encompass many resources and capabilities from across the law
287 enforcement and defense community. Threat response activities during a cyber incident include
288 investigative, forensic, analytical, and mitigation activities; interdiction of a threat actor; and
289 providing attribution that may lead to information sharing and operational synchronization with asset
290 response activities. Threat response activities also include conducting appropriate law enforcement
291 and national security investigative activities at the affected entity's site, linking related incidents, and
292 identifying additional affected or potentially affected entities. As described in the Concurrent Lines
293 of Effort section of this Plan, threat responders and asset responders work together to foster a unity of
294 effort to facilitate their activities while responding to incidents. The SLTT community and the private
295 sector play important roles in working with respective law enforcement entities on threat response
296 activities. Other Federal agencies such as DoD and Department of Energy (DOE) may provide
297 elements of threat response through their counterintelligence organizations, particularly when the
298 incident involves their contractors and possible nation-state affiliated cyber actors.

299 **Private Sector**

300 Small, medium, and large private sector entities perform critical roles in supporting threat response
301 activities by reporting and sharing information regarding cyber incidents and malicious cyber activity
302 in a timely manner to appropriate law enforcement agencies or government entities. Information,
303 communications, and technology providers and manufacturers—such as Internet service providers,
304 common carriers, manufacturers of key networking hardware, and major software companies—also
305 play an important role in the threat response to malicious cyber activity, due to the potential
306 exploitation or use of their systems by cyber threat actors. Points of contact for reporting incidents to
307 Federal Government entities are provided in Annex C: Reporting Cyber Incidents to the Federal
308 Government. Private sector entities should also adhere to regulatory and legal requirements when
309 reporting cyber incidents. Private sector cybersecurity practitioners and providers that offer critical
310 services (such as managed security services, indications and warning, cybersecurity assessment, and
311 incident response) may also possess information concerning malicious cyber activity that is
312 important to enable threat response activities.

313 **State, Local, Tribal, and Territorial Governments**

314 Many states have criminal statutes regarding unauthorized access or damage to computer systems,
315 which may be implicated in a cyber incident. State law enforcement agencies have a critical role in
316 investigating violations of these, and other statutes related to malicious cyber activity, and
317 coordinating with other law enforcement entities in conducting investigations that extend beyond
318 their geographic or authoritative jurisdictions.

319 **Federal Government**

320 In response to cyber incidents, Federal law enforcement agencies work across SLTT and Federal
321 governments, international levels, and with private sector entities to address both criminal and
322 national security cyber threats. Federal law enforcement agencies, such as the Federal Bureau of
323 Investigations (FBI), United States Secret Service (USSS), and Immigration and Customs
324 Enforcement (ICE) Homeland Security Investigations (HSI), conduct threat response activities
325 related to criminal activity involving their investigative jurisdictions and coordinate appropriately.

326 DOJ's Offices of U.S. Attorneys and its Criminal and National Security Divisions, working with
327 Federal law enforcement agencies, use criminal and national security authorities to investigate,
328 prosecute, and disrupt cyber threats and to apprehend cyber threat actors. Information and evidence
329 obtained pursuant to appropriate legal process is used to identify the source of cyber incidents and to

330 gather pertinent cyber threat information. Nationwide coordination of cyber prosecutorial initiatives
331 is conducted through the Computer Hacking and Intellectual Property Program for criminal matters
332 and by the National Security Cyber Specialist Network for cyber threats to the national security. In
333 addition, DOJ, through the FBI and the National Cyber Investigative Joint Task Force (NCIJTF),
334 shares investigative information and cyber threat intelligence, as appropriate, with other Federal
335 agencies to aid in the analysis of cyber threats and vulnerabilities.

336 DHS law enforcement agencies, including the USSS and ICE-HSI, conduct threat response activities
337 related to criminal activity involving their investigative jurisdictions.

338 DoD is responsible for threat response to cyber incidents affecting DoD assets and the DoD
339 Information Network (DoDIN). DoD may support threat response efforts for cyber incidents outside
340 the DoDIN at the request of the lead federal agency, or at the direction of the Secretary of Defense or
341 the President. Such support may be provided based upon the needs of the incident, the capabilities
342 required, and the readiness of available forces.

343 Pursuant to PPD-41, in the event of a significant cyber incident for which a Cyber Unified
344 Coordination Group (UCG) is convened, the DOJ, through the FBI and the NCIJTF, will serve as the
345 lead Federal agency for threat response activities. The specific responsibilities and coordinating roles
346 for this line of effort during a significant cyber incident are detailed in the Operational Coordination
347 During a Significant Cyber Incident section of this Plan.

348 **Asset Response**

349 Asset response activities include furnishing technical assistance to affected entities, mitigating
350 vulnerabilities, identifying additional at-risk entities, and assessing their risk to the same or similar
351 vulnerabilities. These activities may also include communicating with the affected entity to
352 understand the nature of the cyber incident; providing guidance to the affected entity on available
353 Federal resources and capabilities; promptly disseminating new intelligence and information through
354 the appropriate channels; and facilitating information sharing and operational coordination with other
355 Federal Government entities. Assessing potential risks to a sector or region, including potential
356 cascading and interdependency effects, developing courses of action to mitigate these risks, and
357 providing guidance on how best to utilize Federal resources and capabilities in a timely, effective
358 manner are also critical asset response activities.

359 Asset and threat responders coordinate and share some responsibilities and activities when
360 responding to a cyber incident. The roles and responsibilities in asset response vary, which highlights
361 that unity of effort and shared responsibility is necessary to protect the Nation against cyber
362 incidents.

363 **Private Citizens**

364 Cyber incidents, in particular, can result from the actions, or inactions, of a single individual. When
365 engaged and educated, individuals, families, and households can greatly reduce the impact,
366 disruption, and damage caused by a cyber event. By implementing basic precautions, individuals can
367 reduce the risk and potential impact of a cyber incident by keeping software patched and updated,
368 avoiding suspicious websites and emails, and protecting their personal information and systems by
369 utilizing strong password practices and multi-factor authentication.

370 **Private Sector**

371 The private sector, especially the owners and operators of critical infrastructure, plays a key role in
372 responding to cyber incidents. Small, medium, and large private sector entities are often the first and
373 primary responders to cyber incidents. Private companies are responsible for the security of their own

374 systems, and they are normally the first to identify an incident and are often in the best place to
375 respond to it. Private entities that have a mandatory reporting requirement should report incidents to
376 meet the required reporting thresholds even if they otherwise mitigate the event. In most cases, these
377 incidents are considered routine and are mitigated by the company using internal resources or with
378 the assistance of contracted services providers. Similarly, private sector service providers provide
379 technology services to a broad swath of private companies and government agencies, and they
380 support incident response efforts for their customers based on the terms of established contacts.

381 Private sector cybersecurity practitioners and providers offer critical services, such as managed
382 security services, indications and warning, cybersecurity assessment, and incident response, which
383 system owners and other asset responders might need when managing an incident. These private
384 sector resources can serve as surge and specialty support to augment an in-house cybersecurity team
385 at an affected entity.

386 Information, communications, and technology providers and manufacturers, such as Internet service
387 providers, common carriers, manufacturers of key networking hardware, and major software
388 companies, play an important role in defending against and responding to malicious cyber activity.
389 Effective coordination between these private sector entities and other response organizations is often
390 essential in cyber incident response.

391 Critical infrastructure owners and operators work with DHS and relevant sector-specific agencies
392 (SSA) implementing the National Infrastructure Protection Plan (NIPP)⁹ tenets of public-private
393 partnership to improve preparedness and manage risk. Due to the tightly interconnected and
394 interdependent nature of some sectors, companies may also need to provide information to other
395 entities in the sector to facilitate shared situational awareness, contain the incident, and/or mitigate
396 any damage. Thus, companies will potentially look to share and receive information from a variety of
397 sources including DHS, SSAs, and Federal law enforcement and counterintelligence activities as well
398 as their respective sector Information Sharing Analysis Centers (ISAC) and other information sharing
399 and analysis organizations.

400 However, cyber incidents, especially significant cyber incidents, may involve greater coordination
401 with the governments, SLTT communities, regulators within the sector, and among multiple
402 sectors. In addition to responding to situations in which private companies are themselves the victims
403 of cyber incidents, private entities also respond to situations in which private sector service providers
404 (especially internet service providers, managed security service providers, and other technology
405 vendors) are called upon to support national-level incident response efforts. During such an event,
406 the private sector often provides support or assistance to Federal departments and agencies on
407 preparedness and response activities. Federal and SLTT regulators may also have mandatory
408 reporting requirements for certain types of cyber incidents. Depending on the sector and type of
409 incident, some response actions may require regulator coordination, approval, and/or regulatory
410 relief.

411 As appropriate, private sector entities may provide for the security of their networks and security
412 processing of breaches or other incidents through standing in-house or contracted services or use of
413 external experts. Standing services are a part of the entity's network structure, and the private sector
414 entity should share with government responders the information the standing services develop or
415 pursue concerning a cyber incident. If private sectors engage external experts for such purposes, they
416 should continue access of the government responders to that information.

⁹ NIPP, 2013. <https://www.dhs.gov/national-infrastructure-protection-plan>.

417 State, Local, Tribal, and Territorial Government

418 Ensuring the safety and welfare of citizens is a fundamental responsibility of government at every
419 level. Toward these objectives, chief executives of each SLTT government are responsible for
420 ensuring preparedness, response, and recovery activities within their jurisdiction.

421 However, for cyber incidents, the standard emergency response roles and responsibilities may not be
422 sufficient to address technical challenges. In establishing strong governance and reporting
423 mechanisms, executives should identify key individual response points-of-contact for their respective
424 governments and ensure the Federal Government has the most up-to-date information for these
425 individuals. To facilitate coordination during a significant cyber incident response operation, each
426 chief executive should pre-designate a primary individual to serve as Senior Official to represent its
427 government.

428 Resources available to SLTT communities include, but are not limited to, the following:

- 429 ▪ Regional Homeland Security Offices and Fusion Centers;
- 430 ▪ Multi-State ISAC (MS-ISAC) that acts as a focal point for critical information exchange and
431 coordination between the SLTT community and the Federal Government;
- 432 ▪ DHS National Protection and Programs Directorate field personnel, including:
 - 433 • Supervisory, Regional, and District-level Cybersecurity Advisors (CSAs), who work closely
434 with SLTT Chief Information Security Officers and cyber emergency management
435 communities as cybersecurity subject matter experts;
 - 436 • Regional Directors and Protective Security Advisors (PSAs), who work closely with State
437 Homeland Security Advisors as critical infrastructure protection specialists;
- 438 ▪ The Governors Homeland Security Advisors Council, which provides a structure through which
439 homeland security advisors from each state, territory, and the District of Columbia discuss
440 homeland security issues, share information and expertise, and keep governors informed of the
441 issues affecting homeland security policies in the states;
- 442 ▪ The SLTT Government Coordinating Councils (SLTTGCC), which strengthen the sector
443 partnership structure by bringing together geographically diverse experts from a wide range of
444 critical infrastructure disciplines to ensure that SLTT officials play an integral role in national
445 critical infrastructure security and resilience efforts.

446 The National Guard is a force with dual state and Federal roles. National Guard forces have expertise
447 in critical response functions and many also have expertise and capabilities in cyber activities. At the
448 direction of a state governor and adjutant general, the National Guard may perform state missions,
449 including supporting civil authorities in response to a cyber incident. In certain circumstances, as
450 permitted by law, the National Guard may be requested to perform Federal service or be ordered to
451 active duty to perform DoD missions, which could include supporting a Federal agency in response
452 to a cyber incident.

453 Following a cyber incident, chief executives and points of contact may be asked to provide advice,
454 support, and assistance to Federal departments and agencies on preparedness and response activities
455 related to SLTT priorities. Chief executives should be prepared to request additional resources from
456 the Federal Government—for instance, under the Stafford Act—in the event of a cyber incident that
457 exceeds their government’s capabilities.

458 Federal Government

459 Federal asset response to a cyber incident encompasses many resources and capabilities from across
460 the Federal departments and agencies as well as with the private sector. In response to cyber
461 incidents, the Federal Government works across the national, Federal, SLTT, international levels and
462 with private sector entities to assist in mitigation, recovery, and restoration activities.

463 DHS provides strategic guidance, promotes a national unity of effort, and coordinates the overall
464 Federal effort to promote the security and resilience of the Nation's critical infrastructure from cyber
465 and other threats. Per the NCPA, DHS, through the National Cybersecurity and Communications
466 Integration Center (NCCIC), serves as the Federal civilian interface for sharing information related to
467 cybersecurity risks, incidents, analysis, and warnings for Federal and non-Federal entities.¹⁰ The
468 NCCIC facilitates information sharing to help identify other entities at risk to the same or similar
469 vulnerabilities and shares mitigation recommendations and best practices to protect those at risk. The
470 NCCIC closely coordinates with representation from multiple agencies and the private sector to share
471 cybersecurity information, information about risks, and incidents, analysis, and warnings among
472 Federal and non-Federal entities, and to facilitate coordination regarding cybersecurity risks and
473 incidents across the civilian communities, SLTT governments, and the private sector. Federal asset
474 response support to the private sector from the NCCIC in the form of on-site technical assistance is
475 generally contingent on a request from or consent of the supported entity.

476 SSAs also play a role in incident coordination and response, working with DHS and serving as a day-
477 to-day Federal interface to prioritize and coordinate activities within their respective sectors; carrying
478 out incident management responsibilities consistent with statutory authority and other appropriate
479 policies, directives, or regulations; and providing support or facilitating technical assistance and
480 consultations for that sector to identify vulnerabilities and help mitigate incidents, as appropriate.
481 DHS ensures consistent and integrated approaches across various critical infrastructure sectors, and a
482 nationwide approach including both unity of effort and unity of messages.

483 DHS, working with relevant SSAs, also coordinates the Government's efforts to understand the
484 potential business or operational impact of a cyber incident on critical infrastructure in a given sector
485 and across sectors. SSAs receive support from the DHS NCCIC and the National Infrastructure
486 Coordinating Center (NICC) to maintain and provide situational awareness on threats, incidents, or
487 events impacting critical infrastructure and to facilitate information sharing. This includes a near-
488 real-time capability to provide SSA reports, coordinated with FEMA ESF reporting provided by the
489 National Response Coordination Center, and the capability to solicit and receive information on
490 incidents from public and private sector critical infrastructure partners.

491 In responding to cyber incidents, DHS also works with foreign partners to exchange information and
492 coordinate incident response activities. This international coordination principally occurs between the
493 NCCIC and its foreign government counterparts and builds on regular information sharing and
494 operational coordination relationships.

495 In some cases, regulatory or contract requirements may impose certain obligations on the affected
496 entity related to asset response support, such as mandatory reporting requirements and/or national
497 security determinations that may override normal consultative processes.

498 DoD is responsible for asset response to cyber incidents affecting DoD assets and the DoDIN. DoD
499 can also support civil authorities for cyber incidents through a Defense Support of Civil Authorities
500 (DSCA) request outside the DoDIN, when requested by the lead Federal agency or at the direction of

¹⁰ The National Cybersecurity Protection Act of 2014. Public Law 113-282. December 18, 2014.
<https://www.congress.gov/113/plaws/publ282/PLAW-113publ282.pdf>.

501 the Secretary of Defense or the President. Support may be provided based on the needs of the
502 incident, the capabilities required, and the readiness of available forces.

503 DoD supports asset response activities through the interagency information sharing and policy
504 processes in a cyber incident. DoD also provides cyber threat sharing, analysis, alerting, awareness,
505 and assistance to the Defense Industrial Base, as DoD is the SSA for the sector.

506 When incidents affect intelligence community (IC) assets, the IC Security Coordination Center (IC
507 SCC) is responsible for asset response. The Office of the Director of National Intelligence (ODNI)
508 manages the threat and asset response for the integrated defense of the IC information environment
509 through the IC SCC, in conjunction with IC mission partners and with support from other Federal
510 agencies, as appropriate.

511 Pursuant to PPD-41, in the event of a significant cyber incident for which a Cyber UCG is convened,
512 DHS, through the NCCIC, will serve as the lead Federal agency for asset response activities. The
513 specific responsibilities and coordinating roles for this line of effort during a significant cyber
514 incident are detailed in the Operational Coordination During a Significant Cyber Incident section of
515 this Plan.

516 ***Intelligence Support***

517 Intelligence and related supporting activities play an important role to better understand the cyber
518 incident and implemented targeted diplomatic, economic, or military capabilities to respond and
519 share threat and mitigation information with other potential affected entities or responders. Especially
520 during a significant cyber incident, asset and threat responders should leverage intelligence support
521 activities as necessary to build situational threat awareness; share related threat indicators and
522 analysis of threats; identify and acknowledge gaps; and ultimately create a comprehensive picture of
523 the incident.

524 **Federal Government**

525 ODNI, through the Cyber Threat Intelligence Integration Center (CTIIC), provides intelligence
526 support in response to cyber incidents. In this role, the CTIIC coordinates development of Federal
527 intelligence information for the other Federal cyber centers and Federal stakeholders. This may
528 include pursuing declassification of intelligence and/or “tear-line” reports at different classification
529 levels as appropriate to the circumstances of the incident and overall U.S. equities. The CTIIC also
530 coordinates any intelligence collection activities that may take place as part of the incident through
531 the National Intelligence Manager for Cyber.

532 The DHS Office of Intelligence and Analysis has responsibilities under Title 6¹¹ to provide analysis
533 and warnings related to threats against and vulnerabilities to certain non-Federal stakeholders and
534 works through the NCCIC to share cyber-related intelligence and threat information during cyber
535 incidents.

536 The FBI coordinates the sharing of relevant intelligence and information between both FBI domestic
537 personnel and FBI staff assigned to Legal Attaché offices around the world; coordinates the sharing
538 of intelligence among and between Federal agencies and international intelligence and law
539 enforcement elements; produces and shares analytical products, including those that assess threats to
540 the homeland and inform related planning, capability development, and operational activities; and

¹¹United States Code, 2012 Edition, Supplement 3, Title 6 – Domestic Security. Subchapter II – Information Analysis and Infrastructure Protection, Part A – Access to Information, Sec. 124a – Homeland security information sharing. <https://www.gpo.gov/fdsys/pkg/USCODE-2015-title6/pdf/USCODE-2015-title6-chap1-subchapII-partA-sec124a.pdf>.

541 coordinates with ODNI mission and support centers that provide unique capabilities for homeland
542 security partners.

543 The NCTOC is the 24/7/365 NSA element that characterizes and assesses foreign cybersecurity
544 threats. The NCTOC informs partners of current and potential malicious cyber activity through its
545 analysis of foreign intelligence, with a focus on adversary computer network attacks, capabilities,
546 and exploitations. Upon request, the NCTOC also provides technical assistance to U.S. Government
547 departments and agencies.

548 DoD actively characterizes and assesses foreign cybersecurity threats and informs the relevant
549 interagency partners of current and potential malicious cyber activity.

550 The IC may identify classified information, indicating a potential credible cyber threat to an SLTT,
551 critical infrastructure owner/operator, or other private sector entity. In accordance with Section 4 of
552 Executive Order (EO) 13636, DHS and/or the FBI provide appropriate notification to the targeted
553 entity. Where available, declassified threat detection and mitigation information may also be
554 provided. In circumstances where the source of threat identification, nature of the adversary, or other
555 factors of national security concern exist, incident response processes and procedures adhere to all
556 guidelines and directions for handling matters of national security.

557 Pursuant to PPD-41, in the event of a significant cyber incident for which a Cyber Unified
558 Coordination Group (UCG) is convened, ODNI, through the CTIIC, will serve as the lead Federal
559 agency for intelligence support and related activities. The specific responsibilities and coordinating
560 roles for this line of effort during a significant cyber incident are detailed in the Operational
561 Coordination During a Significant Cyber Incident section of this Plan.

562 **Affected Entity's Response**

563 Entities affected by a cyber incident usually undertake activities to manage the effects of the cyber
564 incident on its operations, customers, and workforce, to include complying with various legal,
565 regulatory, or contractual obligations. When a Federal agency is an affected entity, that agency has
566 primary responsibility for engaging in a variety of efforts to manage the impact of the cyber incident.
567 These efforts may include:

- 568 ▪ Maintaining business or operational continuity;
- 569 ▪ Mitigating potential health and safety impacts;
- 570 ▪ Addressing adverse financial impacts;
- 571 ▪ Protecting privacy;
- 572 ▪ Managing liability risks;
- 573 ▪ Complying with legal and regulatory requirements (including disclosure and notification);
- 574 ▪ Engaging in communications with employees or other affected individuals; and
- 575 ▪ Dealing with external affairs (e.g., media and congressional inquiries).

576 The affected Federal agency will have primary responsibility for this line of effort.

577 When a cyber incident affects a private entity, the Federal Government typically will not play a role
578 in this line of effort, but it will remain cognizant of the affected entity's response activities,
579 consistent with the principles above and in coordination with the affected entity. The relevant SSA
580 will generally coordinate the Federal Government's efforts to understand the potential business or
581 operational impact of a cyber incident on private sector critical infrastructure.

582 Cyber Incidents Involving Personally Identifiable Information (PII)

583 As it relates to cyber incidents affecting civilian Federal Government agencies, if the facts and
584 circumstances lead to a reasonable suspicion that the known or suspected cyber incident involves PII,
585 then the appropriate senior agency officials for privacy will be notified and lead any necessary PII
586 incident response process, as required by the Office of Management and Budget Memorandum
587 M-07-1612, *Safeguarding Against and Responding to the Breach of PII* (and its subsequent
588 revisions), and the agency's Breach Response Plan.¹²

589 Core Capabilities

590 Core capabilities are the distinct critical elements needed to conduct the three lines of effort for a
591 cyber incident: threat response, asset response, and intelligence support. Core capabilities are the
592 activities that generally must be accomplished in cyber incident response, regardless of which levels
593 of government are involved. They provide a common vocabulary to describe the significant functions
594 that must be developed and executed across the whole community to ensure preparedness. Core
595 capability application may be achieved with any combination of properly planned, organized, and
596 trained personnel and deployed through various approaches such as the NIST Cybersecurity
597 Framework or cybersecurity activities developed by the private sector.

598 The capabilities described in this section align to the National Preparedness Goal core capabilities.
599 The National Preparedness Goal organizes the core capabilities into mission areas. This section of
600 this Plan explains what each capability entails and the context in which the nation must be prepared
601 to execute it according to the three lines of effort – threat response, asset response, and intelligence
602 support.

603 While some of the core capabilities are specific to one line of effort, many span all three. For
604 example, incident response planning is the inherent responsibility of all levels of government and
605 private sector entities, especially the owners and operators of critical infrastructure, regardless of
606 whether they are engaged in threat response, asset response, or intelligence support activities.
607 Interdependencies also exist, and many core capabilities are linked to one another through shared
608 assets and services. For example, threat response activities such as interdicting a threat actor and
609 providing attribution could lead to important information sharing and operational synchronization
610 with asset response and intelligence support activities.

611 This section is not an exhaustive list of capabilities, but rather a description of the capabilities that
612 should be developed and utilized for particular needs, and roles, responsibilities, and authorities for
613 the nature and scope of the cyber incident. All levels of government, private and non-profit sector
614 organizations, and critical infrastructure owners and operators should assess their particular risks to
615 identify their core capability requirements.

616 Responding to a cyber incident, like incident response for all other threats and hazards, is a shared
617 responsibility. The whole community must work together to ensure the U.S. is optimally prepared for
618 cyber incidents; yet not every network/system faces the same risks.

619 SSAs should develop and update sector-specific plans to establish goals and priorities for the sector
620 that address their current risk environment, such as the nexus between cyber and physical security,
621 interdependence between various sectors, risks associated with climate change, aging and outdated
622 infrastructure, and the need to ensure continuity in a workforce that is rapidly approaching

¹² Office of Management and Budget Memorandum M-07-16, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information*. May 22, 2007.

<https://www.whitehouse.gov/sites/default/files/omb/memoranda/fy2007/m07-16.pdf>

623 retirement. By applying the actions outlined in the plans, sector participants should be able to create
624 products and tools that support the local and regional jurisdictions where facilities and systems are
625 located and events take place.

626 By engaging the whole community to build and deliver the response core capabilities, the Nation is
627 better prepared to respond to any threat or hazard, assist in restoring basic services and community
628 functionality, and facilitate the integration of recovery activities. Table 2 groups the core capabilities
629 by cross-cutting capabilities, threat response, and asset response lines of effort.

630 **Table 2: Core Capabilities by Line of Effort**

Threat Response	Asset Response	Intelligence Support
Forensics and Attribution		
Intelligence and Information Sharing		
Operational Communications		
Operational Coordination		
Planning		
Public Information and Warning		
Screening, Search, and Detection		
Interdiction and Disruption Threats and Hazards Identification	Access Control and Identify Verification Cybersecurity Infrastructure Systems Logistics and Supply Chain Management Situational Assessment	

631 ***Cross-Cutting Core Capabilities***

632 Seven response core capabilities—Forensics and Attribution, Intelligence and Information Sharing,
633 Operational Communications, Operational Coordination, Planning, Public Information and Warning,
634 and Screening, Search, and Detection—span across all three lines of effort outlined in PPD-41. These
635 common core capabilities are essential to the success of the other core capabilities. They help
636 establish unity of effort among all those involved in responding to the cyber incident.

637 The following subsections discuss each cross-cutting core capability in more detail.

638 **Forensics and Attribution**

639 ***Description***

640 Forensic investigations and efforts to provide attribution for an incident are complementary functions
641 that often occur in parallel during a significant cyber incident.

642 ***Forensics***

643 Forensics is the term for discovering and identifying information relevant to an investigation through
644 both scientific and intelligence-based acumen. In the context of a cyber incident, forensics refers to a
645 number of technical disciplines related to the duplication, extraction, and analysis of data to uncover
646 artifacts relevant to identifying malicious cyber activity. Forensics includes several sub-disciplines,
647 including host-based forensics, network and packet data forensics, memory analysis, data correlation,
648 and malware analysis.

649 During the response to a significant cyber incident, government agencies and private sector partners
650 frequently conduct simultaneous analysis and share analytical results with each other to create a
651 common understanding regarding how an adversary conducted a specific attack and how to defend
652 against these or similar attacks. In the days following an incident, a number of different threat, asset,
653 and business response organizations may also engage in simultaneous forensic analysis. Although
654 these lines of effort may appear to be duplicative, findings from these efforts may vary depending on
655 the entities' varied access to particularized datasets or holdings.

656 ***Attribution***

657 Attribution identifies an adversary linked to a particular event. It is the culmination of the review of
658 evidence and intelligence gathered during an incident which assesses the role that a particular
659 individual, organization, or nation-state may have played in the cyber incident.

660 Attribution occurs over the lifecycle of an investigation and is not often determined at the onset of
661 threat, asset, or intelligence response. Although the development of attribution for a significant cyber
662 event is one of the primary functions of lead Federal response agencies, other government and
663 private sector entities have a significant role to play in determining attribution.

664 An assessment regarding attribution for an incident is not only important for government agencies
665 conducting criminal or national security investigations; it may also be significant to an affected entity
666 as it considers whether to pursue additional legal or civil action against an attacker.

667 ***Critical Tasks***

- 668 ▪ Retrieve digital media and data network security and activity logs.
- 669 ▪ Conduct digital evidence analysis, respecting chain of custody rules where applicable.
- 670 ▪ Conduct physical evidence collections and analysis.
- 671 ▪ Adhere to rules of evidence collection as necessary.
- 672 ▪ Assess capabilities of likely threat actors(s).
- 673 ▪ Leverage the work of incident responders and technical attribution assets to identify malicious
674 cyber actor(s).
- 675 ▪ Interview witnesses, potential associates, and/or perpetrators if possible.
- 676 ▪ Apply confidence levels to attribution assignments, as appropriate.
- 677 ▪ Include suitable inclusion and limitation information for sharing products in attribution elements
678 guidance.
- 679 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
680 protecting individual privacy, civil rights, and civil liberties.

681 This core capability also includes unique and technical activities that support computer network and
682 asset analysis during an incident. These supporting activities contribute to awareness of a
683 comprehensive picture, which ultimately helps reduce the impact of a current incident and prevent
684 future cyber incidents from spreading across the network. These are described in greater detail in
685 Annex G: Federal Policy Coordination Mechanism.

686 **Intelligence and Information Sharing**

687 ***Description***

688 Provide timely, accurate, and actionable information resulting from the planning, direction,
689 collection, exploitation, processing, analysis, production, dissemination, evaluation, and feedback of

690 available information concerning threats of malicious cyber activity to the United States, its people,
691 property, or interests. Intelligence and information sharing is the ability to exchange intelligence,
692 information, data, or knowledge among government or private sector entities, as necessary.

693 In the context of a cyber incident, this capability involves the effective implementation of the
694 intelligence cycle and other information collection and sharing processes by Federal and SLTT
695 entities, the private sector, and international partners to develop situational awareness of potential
696 cyber threats to the U.S.

697 ***Critical Tasks***

- 698 ▪ Monitor, analyze, and assess the positive and negative impacts of changes in the operating
699 environment as it pertains to cyber vulnerabilities and threats.
- 700 ▪ Share analysis results through participation in the routine exchange of security information—
701 including threat assessments, alerts, threat indications and warnings, and advisories—among
702 partners.
- 703 ▪ Confirm intelligence and information sharing requirements for cybersecurity stakeholders.
- 704 ▪ Develop or identify and provide access to mechanisms and procedures for intelligence and
705 information sharing between the private sector and government cybersecurity partners.¹³
- 706 ▪ Use intelligence processes to produce and deliver relevant, timely, accessible, and actionable
707 intelligence and information products to others as applicable, to include critical infrastructure
708 participants and partners with roles in physical response efforts.
- 709 ▪ Share actionable cyber threat information with SLTT and international governments and private
710 sectors to promote shared situational awareness.
- 711 ▪ Enable collaboration via online networks that are accessible to all participants.
- 712 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
713 protecting individual privacy, civil rights, and civil liberties.

714 **Operational Communications**

715 ***Description***

716 Ensure the capacity for timely communications in support of security, situational awareness, and
717 operations, by any and all means available, among and between entities affected by the malicious
718 cyber activity and all responders.

719 In the context of a cyber incident, this capability includes identifying Federal support organizations,
720 capabilities, and teams with internal interoperable voice, video, and data systems and networks
721 essential for effective cyber incident response operations. In a cyber incident, this capability focuses
722 on the timely, dynamic, and reliable movement and processing of incident information in a form that
723 meets the needs of decision makers at all levels of government and authorized participating private
724 sector partner organizations.

¹³ Information sharing must provide effective communication to individuals with access and functional needs, including people with limited English proficiency and people with disabilities, including people who are deaf or hard of hearing and people who are blind or have low vision. Effective communication with individuals with access and functional needs includes use of appropriate auxiliary aids and services, such as sign language and other interpreters, captioning of audio and video materials, user-accessible Web sites, communication in various languages, and use of culturally diverse media outlets.

725 Critical Tasks

- 726 ■ Ensure the capacity to communicate with both the cyber incident response community and the
727 affected entity.
- 728 ■ Establish interoperable and redundant voice, data, and broader communications pathways
729 between SLTT, Federal, and private sector cyber incident responders.
- 730 ■ Facilitate establishment of hastily formed ad hoc voice and data networks on a local and regional
731 basis so critical infrastructure entities can coordinate activities even if internet services fail.
- 732 ■ Coordinate with any UCG (or entity) established to manage physical (or non-cyber) effects of an
733 incident.
- 734 ■ Ensure availability of appropriate secure distributed and scalable incident response
735 communication capabilities.
- 736 ■ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
737 protecting individual privacy, civil rights, and civil liberties.

738 Operational Coordination**739 Description**

740 Establish and maintain a unified and coordinated operational structure and process that appropriately
741 integrate all critical stakeholders and support execution of core capabilities.

742 This is the capability to conduct actions and activities that enable senior decision makers across the
743 whole community to determine appropriate courses of action and to provide oversight for complex
744 operations, to achieve unity of effort and effective outcomes. Operational coordination, in accordance
745 with the principles of the NIMS and the Incident Command System, coordinates the threat response,
746 asset response, and intelligence support activities in the face of a cyber threat or in response to an act
747 of terrorism committed in the homeland. Unity of message is included within the guiding principles.
748 Further information is available in Annex C: Reporting Cyber Incidents to the Federal Government.

749 In the context of a cyber incident, this core capability includes efforts to coordinate activities across
750 and among all levels of government and with private sector partners. This capability involves
751 national operations centers, as well as on-scene response activities that manage and contribute to
752 multi-agency efforts.

753 Critical Tasks

- 754 ■ Mobilize all critical resources and establish coordination structures as needed throughout the
755 duration of an incident.
- 756 ■ Define and communicate clear roles and responsibilities relative to courses of action.
- 757 ■ Prioritize and synchronize actions to ensure unity of effort.
- 758 ■ Ensure clear lines and modes of communication between entities, both horizontally and
759 vertically.
- 760 ■ Assure appropriate private sector participation in operational coordination throughout the cyber
761 incident response cycle consistent with the NIPP.
- 762 ■ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
763 protecting individual privacy, civil rights, and civil liberties.

764 **Planning**

765 *Description*

766 Conduct a systematic process engaging the whole community, as appropriate, in the development of
767 executable strategic, operational, and/or tactical-level approaches to meet defined objectives.

768 In the context of a cyber incident, planning includes both deliberate planning and incident action
769 planning. Deliberate planning involves developing strategic, operational, and tactical plans to
770 prevent, protect against, mitigate the effects of, respond to, and recover from a cyber incident.
771 Incident action planning occurs in a time-constrained environment to develop or rapidly adapt
772 operational and tactical plans in response to an imminent or ongoing cyber incident.

773 *Critical Tasks*

- 774 ■ Initiate a flexible planning process that builds on existing plans as part of the National Planning
775 System.¹⁴
- 776 ■ Collaborate with partners to develop plans and processes to facilitate coordinated incident
777 response activities.
- 778 ■ Establish partnerships that coordinate information sharing between partners to restore critical
779 infrastructure within single and across multiple jurisdictions and sectors.
- 780 ■ Appropriately inform risk management response priorities with critical infrastructure
781 interdependency analysis.
- 782 ■ Identify and prioritize critical infrastructure and determine risk management priorities.
- 783 ■ Conduct cyber vulnerability assessments, perform risk analyses, identify capability gaps, and
784 coordinate protective measures on an ongoing basis in conjunction with the private and nonprofit
785 sectors and local, regional/metropolitan, state, tribal, territorial, insular area, and Federal
786 organizations and agencies.
- 787 ■ Develop operational, incident action, and incident support plans at the Federal level and in the
788 states and territories that adequately identify critical objectives based on the planning
789 requirements; provide a complete and integrated picture of the escalation and de-escalation
790 sequence and scope of the tasks to achieve the objectives; and are implementable within the time
791 frame contemplated in the plan using available resources.
- 792 ■ Formalize partnerships with governmental and private sector cyber incident or emergency
793 response teams to accept, triage, and collaboratively respond to incidents in an efficient manner.
- 794 ■ Formalize partnerships between communities and disciplines responsible for cybersecurity and
795 for physical systems dependent on cybersecurity.
- 796 ■ Formalize relationships between information communications technology and information
797 system vendors and their customers for ongoing product cyber security, business planning, and
798 transition to response and recovery when necessary.
- 799 ■ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
800 protecting individual privacy, civil rights, and civil liberties.

¹⁴ The National Planning System provides a unified approach and common terminology to support the implementation of the [National Preparedness System](#) through plans that support an “all threats and hazards” approach to preparedness. These plans—whether strategic, operational, or tactical—enable the whole community to build, sustain, and deliver the core capabilities identified in the [National Preparedness Goal](#).

801 Public Information and Warning

802 *Description*

803 Deliver coordinated, prompt, reliable, and actionable information to the whole community and the
804 public, as appropriate, through the use of clear, consistent, accessible, and culturally and
805 linguistically appropriate methods to effectively relay information regarding significant threat or
806 malicious cyber activity, as well as the actions being taken and the assistance being made available,
807 as appropriate.

808 In the context of a cyber incident, this capability uses effective and accessible indications and
809 warning systems to communicate significant cyber threats to involved or potentially involved
810 operators, security officials, and the public (including alerts, detection capabilities, and other
811 necessary and appropriate assets).¹⁵

812 *Critical Tasks*

- 813 ▪ Establish accessible mechanisms and provide the full spectrum of support necessary for
814 appropriate and ongoing information sharing among all levels of government, the private sector,
815 faith-based organizations, nongovernmental organizations, and the public.
- 816 ▪ Promptly share actionable information and provide situational awareness with the public, private,
817 and nonprofit sectors and among all levels of government.
- 818 ▪ Leverage all appropriate communication means, such as the Integrated Public Alert and Warning
819 System, public media, social media sites, and technology.
- 820 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
821 protecting individual privacy, civil rights, and civil liberties.
- 822 ▪ Respect applicable information sharing and privacy protections, including Traffic Light Protocol.
- 823 ▪ Assure availability of redundant options to achieve critical public information, indication, and
824 warning outcomes.

825 Screening, Search, and Detection

826 *Description*

827 Identify, discover, or locate threats of malicious cyber activity through active and passive
828 surveillance and search procedures. This may include the use of systematic examinations and
829 assessments, sensor technologies, or physical investigation and intelligence.

830 In the context of a cyber incident, this capability includes the measures which may be taken in
831 response to actionable intelligence that indicates potential targets or types of malicious cyber activity,
832 or the threat actors planning such attacks. Measures may also be taken to verify or characterize a
833 cyber threat that has already been located. Screening relative to a cyber incident may include
834 monitoring the status of the network, assets, sensors, and other technologies that provide information
835 on the security posture that may determine further action as necessary.

836 *Critical Tasks*

- 837 ▪ Locate persons and networks associated with cyber threats.

¹⁵ Public Information and Warning systems must provide effective communication to individuals with disabilities, such as audio and video captioning for multimedia and use-accessible Web sites. Public Information and Warning should also be communicated using various languages and culturally diverse media outlets.

- 838 ▪ Develop relationships and further engage with critical infrastructure participants (private industry
839 and SLTT partners).
- 840 ▪ Conduct authorized physical and electronic searches.
- 841 ▪ Collect and analyze information provided.
- 842 ▪ Detect and analyze malicious cyber activity and support mitigation activities.
- 843 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
844 protecting individual privacy, civil rights, and civil liberties.
- 845 ▪ Respect defined limitations and frontiers of cybersecurity policy among collaborative security
846 partners.

847 ***Threat Response Core Capabilities***

848 The following subsections discuss the core capabilities grouped under the Threat Response line of
849 effort in more detail.

850 **Interdiction and Disruption**

851 ***Description***

852 Delay, divert, intercept, halt, apprehend, or secure threats related to malicious cyber activity.

853 In the context of a cyber incident, these threats include people, software, hardware, or activities that
854 pose a threat to the Nation’s cyber networks and infrastructure. This includes those interdiction and
855 disruption activities that may be undertaken in response to specific, actionable intelligence of a cyber
856 threat. Interdiction and disruption may include the targeting of persons, programs, or equipment or
857 machines to stop or thwart threat activities and employing technical and other means to prevent
858 malicious cyber activities. Interdiction and disruption capabilities help thwart emerging or
859 developing cyber threats and neutralize operations. These capabilities should be utilized in a manner
860 that preserves evidence and the Government’s ability to prosecute those that violate the law.

861 ***Critical Tasks***

- 862 ▪ Deter malicious cyber activity within the United States, its territories, and abroad.
- 863 ▪ Interdict persons associated with a potential cyber threat or act.
- 864 ▪ Strategically deploy assets to interdict, deter, or disrupt cyber threats from reaching potential
865 target(s).
- 866 ▪ Leverage law enforcement and intelligence assets to identify, track, investigate, and disrupt
867 malicious actors threatening the security of the Nation’s public and private information systems.
- 868 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
869 protecting individual privacy, civil rights, and civil liberties.
- 870 ▪ Respect defined limitations and frontiers of cybersecurity policy among collaborative security
871 partners.

872 **Threats and Hazards Identification**

873 ***Description***

874 Identify the threats of malicious cyber activity to networks and system; determine the frequency and
875 magnitude; and incorporate this into analysis and planning processes so as to clearly understand the
876 needs of an entity.

877 In the context of a cyber incident, this capability involves the continual process of collecting timely
878 and accurate data on cyber threats, including accounting for the future impacts of technology
879 advancements, to meet the needs of analysts and decision makers. Effective Threats and Hazards
880 Identification for a cyber incident is supported by standardized data sets, platforms, methodologies,
881 terminologies, metrics, and reporting to unify levels of effort across all layers of government and the
882 private sector, reducing redundancies.

883 ***Critical Tasks***

- 884 ▪ Identify data requirements across stakeholders.
- 885 ▪ Develop and/or gather required data in a timely and efficient manner to accurately identify cyber
886 threats.
- 887 ▪ Ensure that the right people receive the right data at the right time.
- 888 ▪ Translate data into meaningful and actionable information through appropriate analysis and
889 collection tools to aid in preparing the public.
- 890 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
891 protecting individual privacy, civil rights, and civil liberties.
- 892 ▪ Evaluate and resolve gaps in policy, facilitating or enabling technologies, partnerships, and
893 procedures which are barriers to effective threat, vulnerability, and hazard identification for the
894 sectors.

895 ***Asset Response Core Capabilities***

896 The following subsections discuss the core capabilities grouped under the Asset Response line of
897 effort in more detail.

898 **Access Control and Identity Verification**

899 ***Description***

900 Apply and support necessary physical, technological, and cyber measures to control admittance to
901 critical locations and systems. Also referred to as Authentication and Authorization.

902 This capability relies on the implementation and maintenance of protocols to verify identity and
903 authorize, grant, or deny cyber access to specific information and networks.

904 ***Critical Tasks***

- 905 ▪ Verify identity to authorize, grant, or deny access to cyber assets, networks, applications, and
906 systems that could be exploited to do harm.
- 907 ▪ Control and limit access to critical locations and systems to authorized individuals carrying out
908 legitimate activities.
- 909 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
910 protecting individual privacy, civil rights, and civil liberties.
- 911 ▪ Perform audit activities to verify and validate security mechanisms are performing as intended.

912 **Cybersecurity**

913 ***Description***

914 Protect (and, if needed, restore) computer networks, electronic communications systems,
915 information, and services from damage, unauthorized use, and exploitation. More commonly referred

916 to as computer network defense, these activities ensure the security, reliability, confidentiality,
917 integrity, and availability of critical information, records, and communications systems and services
918 through collaborative initiatives and efforts.

919 ***Critical Tasks***

- 920 ▪ Implement countermeasures, technologies, and policies to protect physical and cyber assets,
921 networks, applications, and systems that could be exploited.
- 922 ▪ Secure, to the extent possible, public and private networks and critical infrastructure (e.g.,
923 communication, financial, power grid, water, and transportation systems), based on vulnerability
924 results from risk assessment, mitigation, and incident response capabilities.
- 925 ▪ Create resilient cyber systems that allow for the uninterrupted continuation of essential functions.
- 926 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
927 protecting individual privacy, civil rights, and civil liberties.
- 928 ▪ Respect defined limitations and frontiers of cybersecurity policy among collaborative security
929 partners.

930 **Infrastructure Systems**

931 ***Description***

932 Stabilize critical infrastructure functions, minimize health and safety threats, and efficiently respond
933 and recover systems and services to support a viable, resilient community following malicious cyber
934 activity.

935 Critical infrastructure and cyber networks are interdependent. In a response to a cyber incident, this
936 capability focuses on stabilizing the infrastructure assets and entities, repairing damaged assets,
937 regaining control of remote assets, and assessing potential risks to the critical infrastructure sector at
938 large.

939 ***Critical Tasks***

- 940 ▪ Maintain a deep understanding of the needs for the safe operation of control systems.
- 941 ▪ Stabilize and regain control of infrastructure.
- 942 ▪ Increase network isolation to reduce the risk of a cyber-attack propagating more widely across
943 the enterprise or among interconnected entities.
- 944 ▪ Stabilize infrastructure within those entities that may be affected by cascading effects of the
945 cyber incident.
- 946 ▪ Facilitate the restoration and sustainment of essential services (public and private) to maintain
947 community functionality.
- 948 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
949 protecting individual privacy, civil rights, and civil liberties.
- 950 ▪ Maintain up-to-date data knowledge of mitigation applicable emerging and existing security
951 research, development, and solutions.

952 **Logistics and Supply Chain Management**

953 ***Description***

954 Facilitate and assist with delivery of essential commodities, equipment, and services to include the
955 sustainment of responders in support of responses to systems and networks impacted by malicious

956 cyber activity. Synchronize logistics capabilities and enable the restoration of impacted supply
957 chains.

958 In the context of a cyber incident, this capability focuses on providing the logistical or operational
959 support to achieve cyber incident response priorities established by leadership through identifying,
960 prioritizing, and coordinating immediate response resource requirements.

961 ***Critical Tasks***

- 962 ▪ Mobilize and deliver governmental, nongovernmental, and private sector resources to stabilize
963 the incident and integrate response and recovery efforts, to include moving and delivering
964 resources and services to meet the needs of those impacted by a cyber incident.
- 965 ▪ Facilitate and assist delivery of critical infrastructure components to rapid response and
966 restoration of cyber systems.
- 967 ▪ Enhance public and private resource and services support for impacted critical infrastructure
968 entities.
- 969 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
970 protecting individual privacy, civil rights, and civil liberties.
- 971 ▪ Apply supply chain assurance principles and knowledge within all critical tasks identified above.

972 **Situational Assessment**

973 ***Description***

974 Provide all decision makers with decision-relevant information regarding the nature and extent of the
975 malicious cyber activity, any cascading effects, and the status of the response.

976 In the context of a cyber incident, this capability focuses on rapidly processing and communicating
977 large quantities of information from across the whole community, from the field level to the national
978 level, to provide all decision makers with the most current and accurate information possible.

979 ***Critical Tasks***

- 980 ▪ Coordinate the production and dissemination of modeling and effects analysis to inform
981 immediate cyber incident response actions.
- 982 ▪ Maintain standard reporting templates, information management systems, essential elements of
983 information, and critical information requirements.
- 984 ▪ Develop a common operational picture for relevant incident information shared by more than one
985 organization.
- 986 ▪ Coordinate the structured collection and intake of information from multiple sources for
987 inclusion into the assessment processes.
- 988 ▪ Adhere to appropriate mechanisms for safeguarding sensitive and classified information and
989 protecting individual privacy, civil rights, and civil liberties.

990 ***Intelligence Support Core Capabilities***

991 The core capabilities included under the Cross-Cutting Core Capabilities section (Forensics and
992 Attribution, Intelligence and Information Sharing, Operational Communications, Operational
993 Coordination, Planning, Public Information and Warning, and Screening, Search, and Detection) also
994 represent the core capabilities for the intelligence support line of effort.

995 **Coordinating Structures and Integration**

996 Successfully managing cyber incidents requires a whole-of-Nation approach that facilitates
997 coordination among all stakeholders, including the private sector; SLTT governments; Federal
998 agencies; and international partners. Established structured organize that coordination through
999 established structures that promote unity of effort during incident response.

1000 Coordinating structures are entities comprised of representatives from multiple departments,
1001 agencies, or private sector organizations applicable to the incident responsible for facilitating the
1002 preparedness and delivery of capabilities, developing operational plans, coordinating response
1003 personnel and activities, crafting unified public messaging and alerts, and weighing the political and
1004 policy implications of varying courses of action.

1005 While existing policies and coordinating structures can handle the vast majority of cyber incidents,
1006 significant cyber incidents may require a unique approach to coordinating the whole-of-Nation
1007 response. Pursuant to PPD-41, the U.S. Government will establish a Cyber UCG as the primary
1008 method for coordinating between and among Federal agencies responding to a significant cyber
1009 incident, as well as for integrating private sector partners into incident response efforts as
1010 appropriate. Other coordinating structures should be prepared to integrate and interoperate with a
1011 Cyber UCG, should one be established.

1012 This section describes the major coordination structures in place across stakeholder communities that
1013 can be leveraged for response to cyber incidents requiring external coordination. Specifically, it
1014 describes how these structures will be leveraged, and additional structures incorporated, to provide
1015 operational coordination in response to significant cyber incidents.

1016 ***Coordinating Structures***

1017 Stakeholders can utilize a variety of existing coordinating structures during any cyber incident to
1018 facilitate information sharing, coordinate response activities, access technical assistance and other
1019 resources, provide policy coordination and direction, and enable effective response. Most cyber
1020 incidents that occur on a daily basis are considered routine, and their responses are handled internally
1021 by the affected entity. As such, affected entities may choose to combine any of the coordinating
1022 structures below as deemed necessary to address the unique nature of the incident and specific
1023 organizational or sector needs. For significant cyber incidents, or cyber incidents that have
1024 implications for national security or public health and safety, PPD-41 establishes lead Federal
1025 agencies and a coordinating structures framework with operational response planning and activities
1026 coordinated through a Cyber UCG.

1027 **Private Sector**

1028 For many years, the private sector has successfully engaged in coordination efforts between and
1029 across industry and government around detection, prevention, mitigation, and response to cyber
1030 events through information sharing, analysis, and collaboration. This has most notably been
1031 accomplished across the private sector critical infrastructure community through established ISACs.
1032 ISACs are based, organized, and governed by the private sector, with operational capabilities that
1033 support the public-private partnership around critical infrastructure protection and cybersecurity
1034 every day. The National Council of ISACs routinely facilitates cross-sector coordination to further
1035 productive engagement across the private sector and with government at the Federal, state, and local
1036 levels.

1037 In addition, each of the designated 16 critical infrastructure sectors and sub-sectors designated under
1038 PPD-21: *Critical Infrastructure Security and Resilience*,¹⁶ has a self-organized and self-governed
1039 Sector Coordinating Council (SCC). SCC members include critical infrastructure owners and
1040 operators, industry trade associations, and others across the private sector. SCC's provide a forum for
1041 members to engage with others across their sector, companion GCCs, and SSAs to collaboratively
1042 address the full range of sector-specific and cross-sector critical infrastructure security and resilience
1043 policy and strategy efforts.

1044 Further, in accordance with policy established by EO 13691, DHS is facilitating efforts to identify
1045 procedures to create and accredit Information Sharing and Analysis Organizations (ISAO) to allow
1046 groups of stakeholders to create information sharing groups based on affinity among members (e.g.,
1047 geography, industry or community segment, or threat exposure) that could provide a more formalized
1048 structure for information sharing and the provision of technical assistance. Some organizations,
1049 including those that are well established and delivering value every day, may be recognized as an, or
1050 as a member of more than one, ISAO and/or ISAC concurrently.

1051 **State, Local, Tribal, and Territorial Governments**

1052 These levels of government also have a variety of coordination structures available to them for cyber
1053 incident response. These structures support information sharing, incident response, operational
1054 coordination, and collaboration on policy initiatives among participating governments.

1055 As with private sector organizations, SLTT governments can be members of ISACs, ISAOs, or other
1056 information sharing organizations. They may also be members of the SLTTGCC at the national
1057 policy coordination level. In day-to-day operations coordination, many SLTT governments are
1058 members of the MS-ISAC, which provides information sharing and technical assistance to its
1059 members and has established relationships with the Federal Government. As owners and operators of
1060 critical infrastructure and key resources, certain SLTT government agencies may also be members of
1061 sector-specific ISACs and may also develop unique structures, tailored to their jurisdiction's needs,
1062 to provide coordination and direction to response officials during a cyber incident. Many also
1063 collaborate with one another through selected cyber information sharing groups or organizations such
1064 as the National Association of State Chief Information Officers or the National Governors'
1065 Association.

1066 While many SLTT governments are developing and utilizing operational coordination structures for
1067 cyber incident response, they have not all adopted a standard approach. Most are likely to designate
1068 their state or major urban area fusion center as the primary contact and information sharing hub for
1069 cyber incident coordination. Most states have at least one Fusion Center, which provides a
1070 mechanism for SLTT governments to share homeland security information and analysis with one
1071 another and with the Federal Government, including classified information.

1072 However, not all Fusion Centers have commensurate cyber incident response capabilities. For cyber
1073 incidents with physical effects, or that have consequences that must be managed in collaboration with
1074 other emergency management agencies (e.g., fire departments, public health agencies, human
1075 services offices), emergency operations centers will also likely serve important information sharing
1076 and incident management functions. At the state/territory level, emergency operations centers often
1077 coordinate resource requests with Federal agencies, including FEMA and DoD, and provide
1078 operational coordination with the National Guard.

¹⁶ <https://www.whitehouse.gov/the-press-office/2013/02/12/presidential-policy-directive-critical-infrastructure-security-and-resil>.

1079 Federal Government

1080 The Federal Government organizes coordinating structures into three categories for cyber incident
1081 response: national policy level coordination through the Cyber Response Group (CRG), operational
1082 coordination through Federal Cyber Centers and Federal agencies, and sector coordination through
1083 the SSAs and GCCs.

1084 To coordinate policy at the National level, PPD-41 assigns the National Security Council (NSC) the
1085 responsibility to convene and chair the CRG to coordinate development and implementation of U.S.
1086 Government policy and strategy with respect to significant cyber incidents affecting the Nation or its
1087 interests abroad. Federal departments and agencies, including relevant cyber centers, are invited to
1088 participate in the CRG, as appropriate, based on their respective roles, responsibilities, and expertise
1089 or in the circumstances of a given incident or grouping of incidents. Federal agencies and SSAs that
1090 regularly participate in the CRG develop and implement enhanced coordination procedures and
1091 mechanisms for significant cyber incidents that exceed their capacity to respond.

1092 The Federal Government has established seven cybersecurity centers, with missions that include
1093 executing cyber operations, enhancing information sharing, maintaining situational awareness, and
1094 serving as conduits between public and private sector entities. Any or all of these centers may
1095 coordinate with Federal entities and provide support to cyber incident response to the extent
1096 circumstances dictate and authorities permit. Pursuant to PPD-41, three of these centers coordinate
1097 significant cyber incident response activities within a Cyber UCG: the NCCIC, the NCIJTF, and the
1098 CTIIC.

1099 The Federal Government has also designated a number of SSAs to lead their sector GCCs, which are
1100 governmental counterparts to SCCs. SSAs are designated for each of the 16 critical infrastructure
1101 sectors designated under PPD-21. SSAs leverage their particular knowledge and expertise to fulfill a
1102 number of information sharing, coordination, incident response, and technical assistance
1103 responsibilities to their assigned critical infrastructure sector(s), as detailed in PPD-21 and the NIPP.
1104 GCCs enable interagency and interjurisdictional coordination and include members from Federal and
1105 SLTT governments, as appropriate to the needs of each sector.

1106 International

1107 International information sharing takes place through a variety of mechanisms in both the public and
1108 private sectors. Many organizations have information sharing relationships that extend to
1109 international partner companies and governments. International operational coordination can occur
1110 through relationships that Federal departments and agencies have with their foreign counterparts and
1111 with international organizations, through formal diplomatic channels managed by DOS and through
1112 the relationships that private firms have internally, with other private sector entities, with national
1113 governments, and with international organizations.

1114 Additionally, some ISACs have chosen to open membership to firms and organizations located in
1115 friendly foreign nations, with safeguards in place to preserve confidentiality of information restricted
1116 to U.S. participants. Many Federal Cyber Centers have formal and informal relationships with their
1117 counterparts in foreign nations and routinely share information and collaborate, both during steady
1118 state and cyber incidents. Federal law enforcement agencies also maintain information sharing
1119 channels with foreign counterparts and the International Criminal Police Organization (INTERPOL)
1120 to facilitate international investigations. Additionally, organizations such as the DOS Overseas
1121 Security Advisory Council, for example, coordinates information sharing and collaborative security
1122 activity and analysis for U.S. private sector interests abroad through an industry representative
1123 council structure and established channels at U.S. embassies and other diplomatic posts.

1124 Given existing relationships and the overlapping policy and operational issues that may arise during a
1125 significant cyber incident, it is important to note that international coordination will likely occur
1126 through multiple channels concurrently.

1127 ***Operational Coordination During a Significant Cyber Incident***

1128 Cyber incidents affect domestic stakeholders on an ongoing basis. The majority of these incidents
1129 pose no demonstrable risk to the U.S. national security interests, foreign relations, economy, public
1130 confidence, civil liberties, or public health and safety and thus do not rise to the designation of a
1131 significant cyber incident as defined by PPD-41 and the accompanying Cyber Incident Severity
1132 Schema in Annex B. Such cyber incidents are resolved either by the affected entity alone or with
1133 routine levels of support from, and in coordination with, other private sector stakeholders and/or
1134 from SLTT, Federal, or international government agencies. In the event of a significant cyber
1135 incident, the Federal Government may form a Cyber UCG as the primary method for coordinating
1136 between and among Federal agencies responding to a significant cyber incident and for integrating
1137 private sector partners into incident response efforts as appropriate.

1138 **Determination of Incident Severity**

1139 The Federal Cybersecurity Centers adopted the Cyber Incident Severity Schema established under
1140 PPD-41 as a common framework and shared understanding to evaluate and assess cyber incidents at
1141 all Federal departments and agencies when determining the severity of a cyber incident. Incidents
1142 rated a “3” or greater will equate to a significant cyber incident. Federal Government departments
1143 and agencies should leverage the Cyber Incident Severity Schema when assessing the severity level
1144 and the potential impact of cyber incidents to ensure common terminology, appropriate information
1145 sharing, and proper management to effectively address an incident.

1146 Our Nation’s critical infrastructure sectors are comprised of public and private owners and operators,
1147 both of which provide vital services and possess unique expertise and experience that the Federal
1148 Government and Nation rely heavily upon. Therefore, when determining incident severity, DHS,
1149 through the NCCIC and the SSAs of sectors affected or likely to be affected, may consult with sector
1150 leadership and private sector owners and operators through organizations such as the sector ISAC,
1151 SCC, the National Council of ISACs, and/or the Partnership for Critical Infrastructure Security if the
1152 incident affects or is likely to affect a non-Federal entity in one or more of the critical infrastructure
1153 sectors. The private sector assessment will inform the NCCIC severity rating of a cyber incident.

1154 With the majority of critical infrastructure owned and operated by the private sector, it is more than
1155 likely that the Federal Government will learn of a potential significant cyber incident through
1156 voluntary self-reporting and information sharing from the affected entity or a sector coordinating
1157 mechanism. Non-Federal entities are also encouraged to utilize the Cyber Incident Severity Schema
1158 and/or the NCCIC Cyber Incident Scoring System¹⁷ to help organizations provide a repeatable and
1159 consistent mechanism for estimating the risk of an incident.

1160 Additionally, when a significant cyber incident affects a private sector stakeholder, SLTT
1161 government, or international counterpart, or they have assistance to provide, they have several
1162 options for voluntarily sharing the issue with Federal authorities. They have the option of contacting
1163 any of the following Federal organizations:

- 1164 ▪ The NCCIC or NCIJTF,
- 1165 ▪ Applicable SSA(s),

¹⁷ National Cyber Incident Scoring System. <https://www.us-cert.gov/NCCIC-Cyber-Incident-Scoring-System>.

- 1166 ▪ The local field office of Federal law enforcement agencies, including the FBI, USSS, or U.S.
1167 ICE/HSI, or relevant Military Criminal Investigative Organizations if defense related, or
1168 ▪ The local DHS PSA or CSA.

1169 In addition to voluntary reporting, affected entities that have mandatory reporting requirements
1170 according to law, regulation, or contract must continue to comply with such obligations.

1171 The Federal agency that receives the report will coordinate with other Federal agencies in responding
1172 to the incident, including determining whether or not to establish a Cyber UCG to coordinate the
1173 response to significant cyber incidents. As a part of this determination, stakeholders can provide
1174 information and assessments to Federal agencies regarding their view of the severity of the incident
1175 for their entity and for their sector. Federal agencies will leverage these assessments and engage with
1176 the affected entity for discussion as part of the decision process. As appropriate, the Federal
1177 Government also engages with relevant private sector organizations, ISACs, ISAOs, SCCs, SLTT
1178 governments, and/or international stakeholders for consultation about the severity and scope of the
1179 incident.

1180 ***Enhanced Coordination Procedures***

1181 Per PPD-41, each Federal agency that regularly participates in the CRG, including SSAs, ensures that
1182 it has the standing capacity to execute its role in cyber incident response. To prepare for situations in
1183 which the demands of a significant cyber incident exceed its standing capacity, agencies establish
1184 enhanced coordination procedures. These procedures require dedicated leadership, supporting
1185 personnel, available facilities (physical and communications), and internal processes enabling it to
1186 manage a significant cyber incident under demands that would exceed its capacity to coordinate
1187 under normal operating conditions.

1188 Enhanced coordination procedures help to:

- 1189 ▪ Identify the appropriate pathways for communicating with other Federal agencies during a
1190 significant cyber incident, including the relevant agency points-of-contact, and for notifying the
1191 CRG that enhanced coordination procedures were activated or initiated;
- 1192 ▪ Highlight internal communications and decision-making processes that are consistent with
1193 effective incident coordination; and
- 1194 ▪ Outline processes for maintaining these procedures.

1195 In addition, each Federal agency's enhanced coordination procedures identify the agency's processes
1196 and existing capabilities to coordinate cyber incident response activities in a manner consistent with
1197 PPD-41.

1198 **Cyber UCG**

1199 A Cyber UCG, per PPD-41, serves as the primary national operational coordination mechanism
1200 between and among Federal agencies responsible for identifying and developing operational response
1201 plans and activities during a significant cyber incident, as well as for integrating private sector
1202 partners and the SLTT communities into incident response efforts, as appropriate. The Cyber UCG
1203 bolsters a unity of effort and does not alter agency authorities or leadership, oversight, or command
1204 responsibilities, unless mutually agreed upon between the relevant agency heads and consistent with
1205 applicable legal authorities, including the Economy Act of 1932.

1206 Per PPD-41, a Cyber UCG will be formed by any of the following processes:

- 1207 ▪ At the direction of the NSC Principals Committee (Secretary level), Deputies Committee (Deputy
1208 Security level), or the CRG;

- 1209 ▪ When two or more Federal agencies that generally participate in the CRG, including relevant
1210 SSAs, request its formation based on their assessment of the cyber incident against the severity
1211 schema; and
- 1212 ▪ When a significant cyber incident affects critical infrastructure owners and operators identified
1213 by the Secretary of Homeland Security as owning or operating critical infrastructure for which a
1214 cyber incident could reasonably result in catastrophic regional or national effects on public health
1215 or safety, economic security, or national security.

1216 Per PPD-41, a Cyber UCG conducts the following activities to promote unity of effort in response to
1217 a significant cyber incident:

- 1218 ▪ Coordinates the cyber incident response in a manner consistent with the principles described in
1219 the PPD-41 Annex;
- 1220 ▪ Ensures all appropriate Federal agencies, including SSAs, are incorporated into the incident
1221 response;
- 1222 ▪ Coordinates the development and execution of response and recovery tasks, priorities, and
1223 planning efforts, including international and cross-sector outreach, necessary to respond
1224 appropriately to the incident and to speed recovery;
- 1225 ▪ Facilitates the rapid and appropriate sharing of information and intelligence among Cyber UCG
1226 participants on the incident response and recovery activities;
- 1227 ▪ Coordinates consistent, accurate, and appropriate communications regarding the incident to
1228 affected parties and stakeholders (and those who could be affected), including the public as
1229 appropriate; and
- 1230 ▪ For incidents that include cyber and physical effects, forms a combined UCG with the lead
1231 Federal agency or with any UCG established to manage the physical effects of the incident under
1232 the NRF developed pursuant to PPD-8: *National Preparedness*,¹⁸ or other applicable presidential
1233 policy directives.

1234 The Cyber UCG will promptly coordinate with general counsel from DOJ, DHS, and other relevant
1235 Federal agencies' attorneys about pertinent legal issues as they are identified to quickly consider and
1236 coordinate them with appropriate nongovernmental entities, as necessary.

1237 A Cyber UCG dissolves when enhanced coordination procedures for threat and asset response are no
1238 longer required or the authorities, capabilities, or resources of more than one Federal agency are no
1239 longer required to manage the remaining facets of the Federal response to an incident.

1240 **Structure of a Cyber UCG**

1241 Per PPD-41, when a Cyber UCG is established, the Federal Government establishes three lead
1242 agencies to effectively respond to significant cyber incidents:

- 1243 ▪ DHS is the lead agency for asset response during a significant cyber incident, acting through the
1244 NCCIC. The NCCIC includes representation from the private sector, SLTT, and numerous
1245 Federal agencies. It is a focal point for sharing cybersecurity information, information about risks
1246 and incidents, analysis, and warnings among Federal and non-Federal entities.
- 1247 ▪ DOJ is the lead agency for threat response during a significant cyber incident, acting through the
1248 FBI and the NCIJTF. Comprised of over 20 partner agencies from across law enforcement, the

¹⁸ PPD-8, *National Preparedness*, March 30, 2011. <https://www.dhs.gov/xlibrary/assets/presidential-policy-directive-8-national-preparedness.pdf>.

- 1249 IC, and the DoD, the NCIJTF serves as a multi-agency focal point for coordinating, integrating,
1250 and sharing pertinent information related to cyber threat investigations.
- 1251 ■ ODNI is the lead coordinator for intelligence support during a significant cyber incident, acting
1252 through the CTIIC. The CTIIC provides situational awareness, sharing of relevant intelligence
1253 information, integrated analysis of threat trends, events, identification of knowledge gaps, and the
1254 ability to degrade or mitigate adversary threat capabilities.
- 1255 Drawing upon the resources and capabilities across the Federal Government, the Federal lead
1256 agencies are responsible for:
- 1257 ■ Coordinating any multi-agency threat or asset response activities to provide unity of effort, to
1258 include coordinating with any agency providing support to the incident, to include SSAs in
1259 recognition of their unique expertise;
- 1260 ■ Ensuring that their respective lines of effort are coordinated with other Cyber UCG participants
1261 and affected entities, as appropriate;
- 1262 ■ Identifying and recommending to the CRG, if elevation is required, any additional Federal
1263 Government resources or actions necessary to appropriately respond to and recover from the
1264 incident; and
- 1265 ■ Coordinating with affected entities on various aspects of threat, asset, and affected entity
1266 response activities through a Cyber UCG, as appropriate.
- 1267 A Cyber UCG will also include SSAs, if a cyber incident affects or is likely to affect sectors they
1268 represent. In addition, as required by the scope, nature, and facts of a particular significant cyber
1269 incident, a Cyber UCG may include participation from other Federal agencies, SLTT governments,
1270 nongovernmental organizations, international counterparts, or the private sector. Each chief executive
1271 should pre-designate a primary individual to serve as senior official to represent its organization.
- 1272 Participation in a Cyber UCG will be limited to organizations with significant responsibility,
1273 jurisdiction, capability, or authority for response, which may not always include all organizations
1274 contributing resources to the response. Cyber UCG participants should be from organizations which
1275 can determine the incident priorities for each operational period and approve an Incident Action Plan,
1276 to include commitment of their organizations' resources to support execution of the Incident Action
1277 Plan. All Federal agencies responding to the significant cyber incident participate in, and coordinate
1278 their response activities with, a Cyber UCG.
- 1279 Depending on the nature and extent of the incident, a Cyber UCG might also incorporate specific
1280 ICT¹⁹ companies, also known as ICT enablers, to directly assist on that specific incident response.
1281 ICT enablers are companies whose functions and capabilities are the foundations of the global cyber
1282 ecosystem. As such, it is these ICT enablers who are often best positioned to share information,
1283 ensure engagement of key players across the internet and ICT realms, and assist with large-scale
1284 response efforts during a significant cyber incident. Cyber UCG participants may be expanded or
1285 contracted as the situation changes during that particular incident response.
- 1286 Additionally, the Cyber UCG will continue to use several pre-existing and well-established
1287 coordinating structures for information sharing to ensure appropriate and timely sharing of actionable
1288 intelligence. Additional organizations may be engaged in response as participants in a Cyber UCG

¹⁹ The President's National Security Telecommunications Advisory Committee's Information Technology Mobilization Scoping Report. May 21, 2014.
<https://www.dhs.gov/sites/default/files/publications/Final%20NSTAC%20Information%20Technology%20Mobilization%20Scoping%20Report.pdf>.

1289 staff or as liaising organizations working in cooperation with the incident management team under
1290 separate leadership structures. Such organizations would generally have awareness of and
1291 opportunities to provide input to the Incident Action Plan, but would not be responsible for its
1292 contents or execution.

1293 Regardless of specific participant composition, all Cyber UCG participants safeguard the privacy of
1294 individuals, sensitive government information, and proprietary private sector information, as
1295 appropriate.

1296 **Information Sharing During Cyber Incident Response**

1297 To the maximum extent allowed by applicable law, Cyber UCGs share cyber threat information
1298 developed during incident response with other stakeholders as quickly, openly, and regularly as
1299 possible, to ensure protective measures can be applied with all applicable stakeholders. This sharing
1300 may at times be constrained by law, regulation, the interests of the affected entity, classification or
1301 security requirements, or other operational considerations. However, participants will strive for unity
1302 of message when sharing with stakeholders and the public. Existing cyber threat information sharing
1303 channels will be used to disseminate such information where feasible.

1304 In some cases, depending on how a Cyber UCG's members have decided to staff a particular
1305 incident, this sharing may also take place via a Public Information Officer designated by the Cyber
1306 UCG or via a Joint Information Center staffed by representatives of responding organizations. In
1307 some cases, ad hoc information sharing mechanisms may be required to provide effective situational
1308 awareness to interested or affected stakeholders. In all cases, Cyber UCGs protect the privacy of
1309 individuals and sensitive private sector information, as appropriate.

1310 **Operational Planning**

1311 An operational plan is a continuous, evolving instrument of anticipated actions that maximizes
1312 opportunities and guides response operations. Operational plans are "living documents," subject to
1313 revision as incidents evolve and new information becomes available. Operational plans seek to:

- 1314 ▪ Improve coordination, collaboration, and communication to identify and prioritize plans of
1315 actions and steps at various thresholds of escalation surrounding a cyber incident;
- 1316 ▪ Improve the ability to gather, analyze, and deconflict multiple sources of information to produce
1317 timely and actionable situational awareness;
- 1318 ▪ Issue alerts and warnings across a broad range of stakeholders to raise awareness and initiate
1319 incident response activities, consequence management, and business continuity plans;
- 1320 ▪ Reduce redundancy and duplication that may adversely impact effective coordination by
1321 articulating and affirming various roles and responsibilities;
- 1322 ▪ Enhance predictability and sustainability to improve collaboration necessary to manage
1323 consequences and assess and mitigate impact; and
- 1324 ▪ Include flexibility and agility to adapt to emerging events and activities.

1325 Operational planning is conducted across the whole community and is an inherent responsibility of
1326 every level of government and the private sector, especially owners and operators of critical
1327 infrastructure. Operational plans should be routinely exercised to ensure identify gaps and establish
1328 continuous improvement plans to improve preparedness and effectiveness of the information sharing
1329 process surrounding a cyber incident.

1330 This NCIRP is not an operational plan for responding to cyber incidents. However, it should serve as
1331 the primary strategic approach for stakeholders to utilize when developing agency- and organization-
1332 specific operational plans. This common doctrine will foster unity of effort for emergency operations
1333 planning, and it will help those affected by cyber incidents to understand how Federal departments
1334 and agencies and other national-level whole community partners provide resources to support the
1335 SLTT communities and private sector response operations.

1336 ***Response Operational Planning***

1337 Both the Comprehensive Preparedness Guide (CPG) 101 and the Response Federal Interagency
1338 Operational Plan (FIOP) are foundational documents that agencies and organizations can leverage
1339 and tailor to cyber incidents to develop their own operational response plans.

1340 The CPG 101 provides information on various types of plans and guidance on the fundamentals of
1341 planning. Federal plans for incidents are developed using a six-step process, in alignment with the
1342 steps described in CPG 101²⁰:

- 1343 ▪ Form a collaborative planning team
- 1344 ▪ Understand the situation
- 1345 ▪ Determine the goals and objectives
- 1346 ▪ Develop the plan
- 1347 ▪ Prepare, review, and approve the plan
- 1348 ▪ Implement and maintain the plan.

1349 The Response FIOP outlines how the Federal Government delivers the response core capabilities.²¹

1350 The Response FIOP provides information regarding roles and responsibilities, identifies the critical
1351 tasks an entity takes in executing core capabilities, and identifies resourcing and sourcing
1352 requirements. It addresses interdependencies and integration with the other mission areas throughout
1353 the plan's concept of operations. It also describes the management of concurrent actions and
1354 coordination points with the areas of prevention, protection, mitigation, and recovery. It does not
1355 contain detailed descriptions of specific department or agency functions, as such information is
1356 located in department- or agency-level operational plans.

1357 The NRF and NIMS guide the Response FIOP. The NRF is based on the concept of tiered response,
1358 with an understanding that most incidents start at the local and tribal level, and as needs exceed
1359 resources and capabilities, additional SLTT and Federal assets are applied. The Response FIOP,
1360 therefore, aligns with other SLTT, insular area, and Federal plans to ensure that all response partners
1361 share a common operational focus. Similarly, integration occurs at the Federal level among the
1362 departments, agencies, and nongovernmental partners that compose the respective mission area
1363 through the frameworks, FIOPs, and departmental and agency operations plans.

1364 ***Application***

1365 While the NRF does not direct the actions of other response elements, the guidance contained in the
1366 NRF and the Response FIOP informs SLTT and insular area governments, as well as nongovernment
1367 organizations and the private sector, regarding how the Federal Government responds to incidents.

²⁰ For more information regarding the CPG 101, please see: <https://www.fema.gov/media-library/assets/documents/25975>.

²¹ For more information regarding the Response FIOP, please see: <http://www.fema.gov/Federal-interagency-operational-plans>.

1368 These partners can use this information to inform their planning and ensure that assumptions
1369 regarding Federal assistance and response, and the manner in which Federal support will be
1370 provided, are accurate.

1371 **Conclusion**

1372 America’s efforts to strengthen the security and resilience of networked technologies is never
1373 finished. To achieve this security and resilience, the public-private partnership is integral to
1374 collectively coming together and identifying priorities, articulating clear goals, mitigating risk, and
1375 adapting and evolving based on feedback and the changing environment. The Federal Government
1376 remains resolute in its commitment to safeguard networks, systems and applications against the
1377 greatest cyber risks it faces, now and for decades to come. This means that this NCIRP is a living
1378 document, and regular reviews of this Plan will ensure consistency with existing and new policies,
1379 evolving conditions, and the NPS and NIMS.

1380

1381 **Annex A: Authorities and Statutes**

1382 The authorities listed below are references to the vast landscape of legislation in which the Federal
1383 Government operates, while also converging the environments of technology, security, and
1384 intelligence into threat response, asset response, and intelligence support activities and recognizing
1385 sector-specific regulations that provide additional requirements. While this lists Federal authorities,
1386 certain critical infrastructure sectors are under various sector regulations as outlined by law.

1387 This list is not exhaustive, but it can be leveraged as a foundational resource.

- 1388 ▪ Presidential Policy Directive (PPD)-41: *U.S. Cyber Incident Coordination Policy*
- 1389 ▪ Cybersecurity Act of 2015 (P.L. 114 – 113)
- 1390 ▪ National Cybersecurity Protection Act of 2014 (P.L. 113-282)
- 1391 ▪ Federal Information Security Modernization Act of 2014
- 1392 ▪ Executive Order (EO) 13636: *Improving Critical Infrastructure Cybersecurity*
- 1393 ▪ PPD-21: *Critical Infrastructure Security and Resilience*
- 1394 ▪ PPD-8: *National Preparedness*
- 1395 ▪ EO 12333: *United States Intelligence Activities*, as amended
- 1396 ▪ National Security Presidential Directive (NSPD)-54/ Homeland Security Presidential Directive
1397 (HSPD)-23: *Cybersecurity Policy*
- 1398 ▪ NSPD-51/HSPD-20: *National Continuity Policy*
- 1399 ▪ Office of Management and Budget Memorandum M-07-16, *Safeguarding Against and*
1400 *Responding to the Breach of Personally Identifiable Information*. Intelligence Reform and
1401 Terrorism Prevention Act of 2004 (Public Law 108-458, 118 Stat. 3638)
- 1402 ▪ Intelligence Authorization Act for Fiscal Year 2004 (Public Act 108-177)
- 1403 ▪ HSPD-5: *Management of Domestic Incidents*
- 1404 ▪ Title II, Homeland Security Act (Title II, Public Law 107-296)
- 1405 ▪ National Infrastructure Protection Plan 2013, *Partnering for Critical Infrastructure Security and*
1406 *Resilience*
- 1407 ▪ National Security Directive 42: *National Policy for the Security of National Security*
1408 *Telecommunications and Information Systems*
- 1409 ▪ EO 12829: *National Industrial Security Program*, as amended
- 1410 ▪ EO 12968: *Access to Classified Information*, as amended
- 1411 ▪ EO 13549: *Classified National Security Information Programs for State, Local, Tribal, and*
1412 *Private Sector Entities*
- 1413 ▪ EO 13691: *Promoting Private Sector Cybersecurity Information Sharing*
- 1414 ▪ EO 12472: *Assignment of National Security and Emergency Preparedness Telecommunications*
1415 *Functions*
- 1416 ▪ EO 12382: *President’s National Security Telecommunications Advisory Committee*
- 1417 ▪ Defense Production Act of 1950, as amended
- 1418 ▪ National Security Act of 1947, as amended

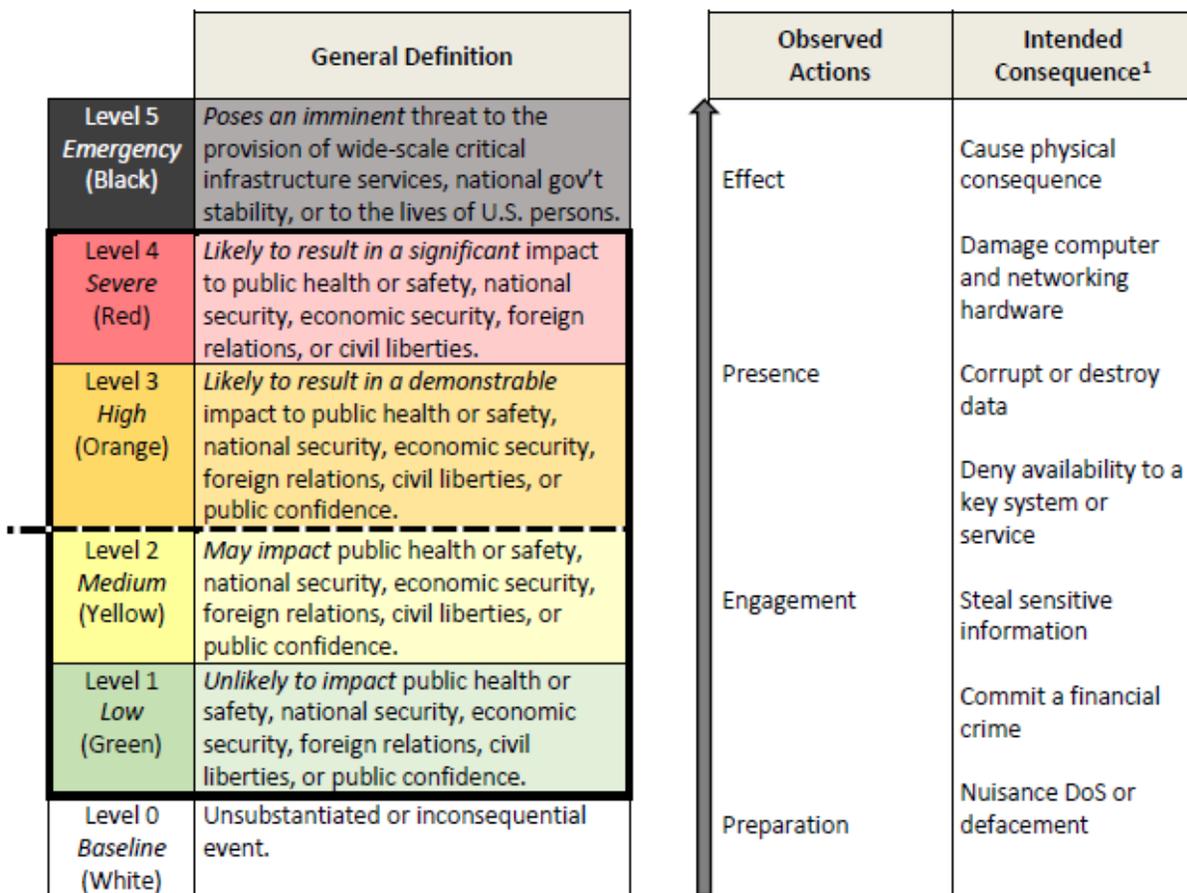

- 1419 ▪ Section 706, Communications Act of 1934, as amended (47 U.S.C. 606)
- 1420 ▪ U.S.C. Title 6 – Domestic Security
- 1421 ▪ U.S.C. Title 10 – Armed Forces
- 1422 ▪ U.S.C. Title 18 – Crimes and Criminal Procedure
- 1423 ▪ U.S.C. Title 28, Section 0.85(a) – Criminal Justice Policy Coordination
- 1424 ▪ U.S.C. Title 32 – National Guard
- 1425 ▪ U.S.C. Title 47 - Telecommunications
- 1426 ▪ U.S.C. Title 50 – War and National Defense
- 1427 In addition, several key Federal decisions may be made to trigger additional Federal authorities.
- 1428 These decisions include:
 - 1429 ▪ Declaration of a major disaster or emergency under the Stafford Act, Section 501 B (Pre-Eminent
 - 1430 Federal Responsibility), as appropriate
 - 1431 ▪ Request support from the Defense Support of Civil Authorities (DSCA), or request technical
 - 1432 assistance from an element of the U.S. Intelligence Community pursuant to EO 12333, as
 - 1433 appropriate
 - 1434 ▪ Use of the Economy Act
 - 1435 ▪ Economic Espionage Act
 - 1436 ▪ Insurrection Act
 - 1437 ▪ National Emergencies Act
 - 1438 ▪ Declaration of a public health emergency as warranted based on the severity of the cascading
 - 1439 effects of the cyber incident(s)
 - 1440 ▪ Request for the invocation of mutual assistance agreements, as appropriate
 - 1441 ▪ Issuance of a Declaration of Emergency or Extraordinary Declaration of Emergency to facilitate
 - 1442 resources, access specific funds, or quarantine or seize animals or products as a result of the
 - 1443 cascading effects of a cyber incident
 - 1444 ▪ Determination of whether the incident is an act of terrorism or an intentional criminal act.
- 1445

1446 Annex B: Cyber Incident Severity Schema

1447 Per Presidential Policy Directive (PPD)-41, the U.S. Federal Cybersecurity Centers, in coordination
 1448 with departments and agencies with a cybersecurity or cyber operations mission, adopted a common
 1449 schema for describing the severity of cyber incidents affecting the homeland, U.S. capabilities, or
 1450 U.S. interests. The schema establishes a common framework to evaluate and assess cyber incidents to
 1451 ensure that all departments and agencies have a common view of the:

- 1452 ▪ Severity of a given incident;
- 1453 ▪ Urgency required for responding to a given incident;
- 1454 ▪ Seniority level necessary for coordinating response efforts; and
- 1455 ▪ Level of investment required of response efforts.

1456 Figure 1 below depicts several key elements of the schema.

1457
 1458 **Figure 1: Elements of the Cyber Incident Severity Schema**

1459

1460 **Annex C: Reporting Cyber Incidents to the Federal** 1461 **Government**

1462 Cyber incidents can have serious consequences. The theft of private, financial, or other sensitive data
1463 and cyber incidents that damage computer systems are capable of causing lasting harm to anyone
1464 engaged in personal or commercial online transactions. Such risks are increasingly faced by
1465 businesses, consumers, and all other users of the internet.

1466 A private sector entity that is a victim of a cyber incident can receive assistance from Federal
1467 Government agencies, which are prepared to investigate the incident, help mitigate its consequences,
1468 and to help prevent future incidents. For example, Federal law enforcement agencies have highly
1469 trained investigators who specialize in responding to cyber incidents for the express purpose of
1470 disrupting threat actors who caused the incident and preventing harm to other potential victims.

1471 In addition to law enforcement, other Federal responders provide technical assistance to protect
1472 assets, mitigate vulnerabilities, and offer on-scene response personnel to aid in incident recovery.
1473 When supporting affected entities, the various agencies of the Federal Government work in tandem
1474 to leverage their collective response expertise, apply their knowledge of cyber threats, preserve key
1475 evidence, and use their combined authorities and capabilities both to minimize asset vulnerability and
1476 bring malicious actors to justice. This Appendix explains when, what, and how to report to the
1477 Federal Government in the event of a cyber incident.

1478 ***When to Report to the Federal Government***

1479 A cyber incident is an event that could jeopardize the confidentiality, integrity, or availability of
1480 digital information or information systems. Cyber incidents resulting in significant damage are of
1481 particular concern to the Federal Government. Accordingly, victims are encouraged to report all
1482 cyber incidents that may:

- 1483 ▪ Result in a significant loss of data, system availability, or control of systems;
- 1484 ▪ Impact a large number of victims;
- 1485 ▪ Indicate unauthorized access to, or malicious software present on, critical information technology
1486 systems;
- 1487 ▪ Affect critical infrastructure or core government functions; or
- 1488 ▪ Impact national security, economic security, or public health and safety.

1489 ***What to Report***

1490 A cyber incident may be reported at various stages, even when complete information is not available.
1491 Helpful information could include who you are, who experienced the incident, what sort of incident
1492 occurred, how and when the incident was initially detected, what response actions have already been
1493 taken, and who has been notified.

1494 ***How to Report Cyber Incidents to the Federal Government***

1495 Private sector entities experiencing cyber incidents are encouraged to report a cyber incident to the
1496 local field offices of Federal law enforcement agencies, their SSA, or any of the Federal agencies
1497 listed in Table 3. The Federal agency receiving the initial report will coordinate with other relevant
1498 Federal stakeholders to respond to the incident. If the affected entity is obligated by law or contract
1499 to report a cyber incident, the entity should comply with that obligation, in addition to voluntarily
1500 reporting the incident to an appropriate Federal point of contact.

1501 *Types of Federal Incident Response*

1502 Upon receiving a report of a cyber incident, the Federal Government will promptly focus its efforts
1503 on two activities: threat response and asset response:

- 1504 ▪ Threat response includes attributing, pursuing, and disrupting malicious cyber actors and
1505 malicious cyber activity. It includes conducting criminal investigations and other actions to
1506 counter the malicious cyber activity.
- 1507 ▪ Asset response includes protecting assets and mitigating vulnerabilities in the face of malicious
1508 cyber activity. It includes reducing the impact to systems and/or data; strengthening, recovering
1509 and restoring services; identifying other entities at risk; and assessing potential risk to the broader
1510 community and mitigating potential privacy risks to affected individuals.

1511 Irrespective of the type of incident or its corresponding response, Federal agencies work together to
1512 help affected entities understand the incident, link related incidents, and share information to rapidly
1513 resolve the situation in a manner that protects privacy and civil liberties.

1514 **Table 3: Key Federal Point of Contact**

Threat Response	Asset Response
<p>Federal Bureau of Investigation (FBI): FBI Field Office Cyber Task Forces: http://www.fbi.gov/contact-us/field Internet Crime Complaint Center (IC3): http://www.ic3.gov</p> <ul style="list-style-type: none"> ▪ Report cybercrime, including computer intrusions or attacks, fraud, intellectual property theft, identity theft, theft of trade secrets, criminal hacking, terrorist activity, espionage, sabotage, or other foreign intelligence activity to FBI Field Office Cyber Task Forces. ▪ Report individual instances of cybercrime to the IC3, which accepts Internet crime complaints from both victim and third parties. 	<p>National Cybersecurity and Communications Integration Center (NCCIC) (888) 282-0870 or NCCIC@hq.dhs.gov</p> <p>United States Computer Emergency Readiness Team: http://www.us-cert.gov</p> <ul style="list-style-type: none"> ▪ Report suspected or confirmed cyber incidents, including when the affected entity may be interested in government assistance in removing the adversary, restoring operations, and recommending ways to further improve security.
<p>National Cyber Investigative Joint Task Force (NCIJTF) CyWatch 24/7 Command Center: cywatch@ic.fbi.gov or (855) 292-3937</p> <ul style="list-style-type: none"> ▪ Report cyber intrusions and major cybercrimes that require assessment for action, investigation, and engagement with local field offices of Federal law enforcement agencies or the Federal Government. 	
<p>United States Secret Service (USSS) Secret Service Field Offices and Electronic Crimes Task Forces (ECTFs): http://www.secretservice.gov/contact/field-offices</p> <ul style="list-style-type: none"> ▪ Report cybercrime, including computer intrusions or attacks, transmission of malicious code, password trafficking, or theft of payment card or other financial payment information. 	

Threat Response	Asset Response
<p>United States Immigration and Customs Enforcement / Homeland Security Investigations (ICE/HSI) HSI Tip Line: 866-DHS-2-ICE (866-347-2423) or www.ice.gov/webform/hsi-tip-form HSI Field Offices: https://www.ice.gov/contact/hsi HSI Cyber Crimes Center: https://www.ice.gov/cyber-crimes</p> <ul style="list-style-type: none"> ▪ Report cyber-enabled crime, including: digital theft of intellectual property; illicit e-commerce (including hidden marketplaces); Internet-facilitated proliferation of arms and strategic technology; child pornography; and cyber-enabled smuggling and money laundering. 	

1515

1516 If there is an immediate threat to public health or safety, the public should always call 911.

1517

1518 **Annex D: Roles of Federal Centers**

1519 The Federal Government has established a number of cyber centers associated with various
1520 departments and agencies to execute operational mission, enhance information sharing, maintain
1521 situational awareness of cyber incidents, and serve as conduits between public-and private-sector
1522 stakeholder entities. In support of the Federal Government’s coordinating structures on cyber
1523 incident management, a Cyber Unified Coordination Group may elect to leverage these cyber centers
1524 for their established enhanced coordination procedures, above-steady-state capacity, and/or
1525 operational or support personnel.

1526 ***National Cybersecurity and Communications Integration Center*** 1527 ***(NCCIC)***

1528 As an operational element of the Department of Homeland Security, the NCCIC is the primary
1529 platform to coordinate the Federal Government’s asset response to cyber incidents. The NCCIC is
1530 authorized under Section 3 of the National Cybersecurity Protection Act of 2014.

1531 ***National Cyber Investigative Joint Task Force (NCIJTF)***

1532 The NCIJTF is a multi-agency center hosted by the Federal Bureau of Investigation and is the
1533 primary platform to coordinate the Federal Government’s threat response. The NCIJTF is chartered
1534 under paragraph 31 of National Security Presidential Directive-54/Homeland Security Presidential
1535 Directive-23.

1536 ***Cyber Threat Intelligence Integration Center (CTIIC)***

1537 Operated by the Office of the Director of National Intelligence, the CTIIC is the primary platform for
1538 intelligence integration, analysis, and supporting activities. CTIIC also provides integrated all-source
1539 analysis of intelligence related to foreign cyber threats or related to cyber incidents affecting U.S.
1540 national interests.

1541 ***U.S. Cyber Command (USCYBERCOM) Joint Operations Center (JOC)***

1542 The USCYBERCOM JOC directs the U.S. military’s cyberspace operations and defense of the
1543 Department of Defense Information Network (DoDIN). USCYBERCOM manages both the threat
1544 and asset responses for the DoDIN during incidents affecting the DoDIN and receives support from
1545 the other centers, as needed. USCYBERCOM’s National Mission Forces may play a role in the
1546 response to a significant cyber incident not involving the DoDIN through a Defense Support of Civil
1547 Authorities (DSCA) request.

1548 ***National Security Agency/Central Security Service Cybersecurity*** 1549 ***Threat Operations Center (NCTOC)***

1550 The National Security Agency/Central Security Service (NSA/CSS) Cybersecurity Threat Operations
1551 Center (NCTOC) is the 24/7/365 NSA element that characterizes and assesses foreign cybersecurity
1552 threats. The NCTOC informs partners of current and potential malicious cyber activity through its
1553 analysis of foreign intelligence, with a focus on adversary computer network attacks, capabilities,
1554 and exploitations. Upon request, the NCTOC also provides technical assistance to U.S. Government
1555 departments and agencies.

1556 ***Department of Defense Cyber Crime Center (DC3)***

1557 DC3 supports the law enforcement, counterintelligence, information assurance, network defense, and
1558 critical infrastructure protection communities through digital forensics, focused threat analysis, and
1559 training. DC3 provides analytical and technical capabilities to Federal agency mission partners
1560 conducting national cyber incident response.

1561 ***Intelligence Community – Security Coordination Center (IC-SCC)***

1562 The IC SCC is one of the National Cybersecurity Centers and its mission is to monitor and oversee
1563 the integrated defense of the IC Information Environment (IC IE) in conjunction with IC mission
1564 partners in accordance with the authority and direction of the ODNI Chief Information Officer (IC
1565 CIO). The Intelligence Community Incident Response Center (IC-IRC) roles and responsibilities
1566 were assumed upon the IC SCC’s founding in 2014.

1567

1568

1569 Annex E: Types of Cyber Incident/Attack Vectors

- 1570
- 1571
- 1572
- 1573
- 1574
- 1575
- 1576
- 1577
- 1578
- 1579
- 1580
- 1581
- 1582
- 1583
- 1584
- 1585
- 1586
- 1587
- 1588
- 1589
- 1590
- 1591
- 1592
- Attrition – An attack that employs brute force methods to compromise, degrade, or destroy systems, networks, or services (e.g., a Distributed Denial of Service intended to impair or deny access to a service or application; a brute force attack against an authentication mechanism, such as passwords, or digital signatures).
 - Email – An attack executed via an email message or attachment; for example, exploit code disguised as an attached document or a link to a malicious website in the body of an email message.
 - External/Removable Media – An attack executed from removable media or a peripheral device; for example, malicious code spreading onto a system from an infected Universal Serial Bus flash drive.
 - Impersonation – An attack involving replacement of something benign with something malicious; for example, spoofing, man in the middle attacks, rogue wireless access points, and SQL injection attacks involve impersonation.
 - Improper Usage – Any incident resulting from violation of an organization’s acceptable usage policies by an unauthorized user; for example, a user installs file sharing software, leading to the loss of sensitive data; or a user performs illegal activities on a system.
 - Loss or Theft of Equipment – The loss or theft of a computing device or media used by the organization, such as a laptop, smartphone, or authentication token.
 - Other – An attack that does not fit into any of the other categories.
 - Web – An attack executed from a website or web-based application; for example, a cross-site scripting attack used to steal credentials or a redirect to a site that exploits a browser vulnerability and installs malware.

1593 **Annex F: Developing an Internal Cyber Incident Response** 1594 **Plan**

1595 Public and private sector entities should consider creating an entity-specific operational cyber
1596 incident response plan to further organize and coordinate their efforts in response to cyber incidents.
1597 Each organization should consider a plan that meets its unique requirements and relates to the
1598 organization's mission, size, structure, and functions.

1599 The National Institute of Standards and Technology Special Publication 800-61 (revision 2) outlines
1600 several elements to consider when developing a cyber incident response plan. Each plan should be
1601 tailored and prioritized to meet the needs of the organization and adhere to current information
1602 sharing and reporting requirements, guidelines, and procedures, where they exist. As appropriate,
1603 public and private sector entities are encouraged to collaborate in the development of cyber incident
1604 response plans to promote shared situational awareness, information sharing, and acknowledge
1605 sector, technical, and geographical interdependences.

1606 The elements below serve as a starting point of important criteria to build upon for creating a cyber
1607 incident response plan:

- 1608 ▪ Mission
- 1609 ▪ Strategies and goals
- 1610 ▪ Organizational approach to incident response
- 1611 ▪ Risk assessments
- 1612 ▪ Cyber Incident Scoring System/Criteria²²
- 1613 ▪ Incident reporting and handling requirements
- 1614 ▪ How the incident response team will communicate with the rest of the organization and with
1615 other organizations
- 1616 ▪ Metrics for measuring the incident response capability and its effectiveness
- 1617 ▪ Roadmap for maturing the incident response capability
- 1618 ▪ How the program fits into the overall organization
- 1619 ▪ Communications with outside parties, such as:
 - 1620 • Customers, constituents, and media
 - 1621 • Software and support vendors
 - 1622 • Law enforcement agencies
 - 1623 • Incident responders
 - 1624 • Internet service providers
 - 1625 • Critical infrastructure sector partners
- 1626 ▪ Roles and responsibilities (preparation, response, recovery)

²² The NCCIC Cyber Incident Scoring System could be used as a basis for an organizations operations center to assist in the internal elevation of a particular incident. <https://www.us-cert.gov/NCCIC-Cyber-Incident-Scoring-System>.

- 1627 • State fusion centers
- 1628 • Emergency operations center
- 1629 • Local, regional, state, tribal, and territorial government
- 1630 • Private sector
- 1631 • Private citizens
- 1632 ▪ A training and exercise plan for coordinating resources with the community
- 1633 ▪ Plan maintenance schedule/process.
- 1634

1635 **Annex G: Federal Policy Coordination Mechanism**

1636 ***Cyber Response Group***

1637 At the national policy coordination level, per Presidential Policy Directive (PPD)-41, the Cyber
1638 Response Group (CRG), in support of the National Security Council (NSC) Deputies and Principals
1639 Committees, and accountable through the Assistant to the President for Homeland Security and
1640 Counterterrorism (APHSCT) to the NSC chaired by the President, shall coordinate the development
1641 and implementation of U.S. Government policy and strategy with respect to significant cyber
1642 incidents affecting the U.S. or its interests abroad.

1643 Per the Annex to PPD-41, it shall:

- 1644 ▪ Coordinate the development and implementation of the Federal Government's policies,
1645 strategies, and procedures for responding to significant cyber incidents;
- 1646 ▪ Receive regular updates from the Federal cybersecurity centers and agencies on significant cyber
1647 incidents and measures being taken to resolve or respond to those incidents, including those
1648 involving personally identifiable information (PII);
- 1649 ▪ Resolve issues elevated to it by subordinate bodies as may be established, such as a Cyber UCG;
- 1650 ▪ Collaborate with the Counterterrorism Security Group and Domestic Resilience Group when a
1651 cross-disciplinary response to a significant cyber incident is required;
- 1652 ▪ Identify and consider options for responding to significant cyber incidents, including those
1653 involving PII, and make recommendations to the Deputies Committee (Deputy Secretary level),
1654 where higher-level guidance is required, in accordance with PPD-1: *Organization of the NSC*
1655 *System* of February 13, 2009, or any successor; and
- 1656 ▪ Consider the policy implications for public messaging in response to significant cyber incidents
1657 and coordinate a communications strategy, as necessary, regarding a significant cyber incident.

1658 The CRG shall be chaired by the Special Assistant to the President and Cybersecurity Coordinator
1659 (Chair), or an equivalent successor, and shall convene on a regular basis and as needed at the request
1660 of the APHSCT and Deputy National Security Advisor. Federal departments and agencies, including
1661 relevant cyber centers, shall be invited to participate in the CRG, as appropriate, based on their
1662 respective roles, responsibilities, and expertise or in the circumstances of a given incident or
1663 grouping of incidents.

1664 CRG participants shall generally include senior representatives from the Departments of State, the
1665 Treasury, Defense (DoD), Justice (DOJ), Commerce, Energy, Homeland Security (DHS) and its
1666 National Protection and Programs Directorate, and the United States Secret Service, the Joint Chiefs
1667 of Staff, Office of the Director of National Intelligence, the Federal Bureau of Investigation, the
1668 National Cyber Investigative Joint Task Force, the Central Intelligence Agency, and the National
1669 Security Agency. The Federal Communications Commission shall be invited to participate should the
1670 Chair assess that its inclusion is warranted by the circumstances and to the extent the Commission
1671 determines such participation is consistent with its statutory authority and legal obligations.

1672

1673 **Annex H: Best Practices or Recommended Ongoing** 1674 **Activities**

1675 By engaging the whole community to build and deliver the cyber incident response core capabilities,
1676 the Nation is better prepared to respond to any cyber threat, assist in restoring basic services and
1677 community functionality, and facilitate the integration of recovery activities. Incident Response is
1678 just one aspect of cybersecurity, but it spans multiple mission areas. The best practices below
1679 describe critical tasks that small, medium, and large organizations and individuals should be aware of
1680 that is outside the scope of incident response, but is also important in safeguarding networks and
1681 assets. These best practices are also meant to complement existing security measures that are relative
1682 to cybersecurity in general.

1683 ***Long-Term Vulnerability Reduction***

1684 **Description**

1685 Build and sustain resilient systems, communities, critical infrastructure, and key resources lifelines to
1686 reduce their vulnerability to malicious cyber activity by lessening the likelihood, severity, and
1687 duration of the adverse consequences.

1688 In the context of a cyber incident, this capability focuses on taking stock of current and emerging
1689 cyber threats; assessing the current risk and ability to recover from malicious cyber activity;
1690 developing a plan that addresses identified vulnerabilities; and analyzing available resources,
1691 processes, programs, and funding opportunities. The result is informed action that leads to lasting
1692 reductions in vulnerability to cyber networks and systems.

1693 **Critical Tasks**

- 1694 ▪ Work to shape the cyber ecosystem. This ranges from work to encourage companies to build
1695 security into their software and hardware systems in the first place, to work to stimulate the
1696 insurance industry to address cyber security risks, to our work to increase the number of our
1697 nation's cybersecurity professionals.
- 1698 ▪ Support security researchers and encourage responsible disclosure etiquette and norms and laws
1699 that support prompt patching of vulnerabilities.
- 1700 ▪ Strongly encourage cyber best practices throughout the private sector, and among all Federal and
1701 state, local, tribal, and territorial (SLTT) actors, to include individual citizens and international
1702 partners.

1703 ***Risk and Disaster Resilience Assessment***

1704 **Description**

1705 Assess risk and disaster resilience relating to malicious cyber activity so that decision makers,
1706 responders, and community members can take informed action to reduce their entity's risk and
1707 increase their resilience.

1708 In the context of a cyber incident, this capability evaluates the cyber threat, vulnerability,
1709 consequences, needs, and resources through formal, standardized methods to define and prioritize
1710 risks, so critical infrastructure participants, decision makers, and responders can make informed
1711 decisions and take the appropriate action. Such an assessment directly connects cyber threat and

1712 impact data to analyze and understand the potential effects on an asset, a critical infrastructure sector,
1713 and/or a community.

1714 ***Risk Management for Protection Programs and Activities***

1715 **Description**

1716 Identify, assess, and prioritize risks of malicious cyber activity to inform risk mitigation activities,
1717 countermeasures, and investments.

1718 In the context of a cyber incident, this capability includes implementing and maintaining risk
1719 assessment processes to identify and prioritize cyber assets, systems, networks, and functions, as well
1720 as implementing and maintaining appropriate tools to identify and assess threats, vulnerabilities, and
1721 consequences.

1722 **Critical Tasks**

- 1723 ▪ Gather required data in a timely and accurate manner to effectively identify risks.
- 1724 ▪ Develop and use appropriate tools to identify and assess cyber threats, vulnerabilities, and
1725 consequences.
- 1726 ▪ Leverage risk-informed standards to ensure the security, reliability, integrity, and availability of
1727 critical information, records, and communications systems and services through collaborative
1728 cybersecurity initiatives and efforts.
- 1729 ▪ Identify, implement, and monitor risk management plans.
- 1730 ▪ Validate, calibrate, and enhance risk assessments by relying on experience, lessons learned, and
1731 knowledge beyond raw data or models.
- 1732 ▪ Use risk assessments to design exercises and determine the feasibility of mitigation projects and
1733 initiatives.

1734 ***Supply Chain Integrity and Security***

1735 **Description**

1736 Strengthen the security and resilience of the supply chain. Protecting the cyber supply chain relies on
1737 a layered, risk-based, proactive, and balanced approach which integrates security measures and
1738 resiliency planning into supply chains.

1739 In the context of a cyber incident, this capability relies ensuring the integrity, availability, and
1740 confidentiality of information, key nodes, methods of transport between nodes, and materials in
1741 transit between a cyber supplier and an owner/operator of the critical cyber network or system.

1742 While long-term supply chain security and resiliency efforts are required, validating the security of
1743 the supply chain may be required when responding to a complex cyber incident. Even with effective
1744 supply chain resiliency planning, the expansive nature of the global supply chain renders it
1745 vulnerable to disruption from intentional or naturally occurring causes. This capability employs real-
1746 time verification and detection, flexibility, and redundancy to ensure the availability of goods and
1747 services during a cyber incident, and requires a broad effort from stakeholders across international
1748 and domestic public and private sectors.

1749 **Critical Tasks**

- 1750 ▪ Verify and detect malicious or counterfeit components or systems.

- 1751 ▪ Deploy physical protections, countermeasures, and policies to secure and make resilient key
1752 cyber nodes, methods of transport between nodes, and materials in transit during incident
1753 response efforts.
- 1754 ▪ Execute secure supply chain management to preempt supply chain disruption during incident
1755 response, to identify items of concern during incident response, and to prevent the distribution of
1756 malicious or counterfeit hardware and software.
- 1757 ▪ Develop redundancies and mitigation measures in real time for key dependencies and
1758 interdependencies related to supply chain operations.
- 1759 ▪ Notify government and private sector stakeholders impacted by cyber incidents of supply chain
1760 risks.

1761 ***Technical Capabilities***

1762 The following technical capability activities could be leveraged in core capabilities such as Forensics
1763 and Attribution, as well as Intelligence and Information Sharing. These technical capabilities
1764 demonstrate that information and intelligence may be shared to serve different purposes for each
1765 stakeholder.

1766 **Host System Forensic Analysis**

1767 ***Description***

1768 Host system forensic analysis is a methodology where an analyst conducts a deep dive of a single
1769 system or asset. This analysis identifies the initial compromise or adversary presence, determines
1770 what actions were taken on the system, and/or what elements of the system were changed. Special
1771 attention is paid to how an adversary first enters a system and how this system was used to access
1772 other systems or resources on the network. Additional host system forensics focus on what
1773 information the actor accesses and/or retrieves. This information is often presented in a timeline
1774 format so it can be correlated with other events during a response of a single system or asset.

1775 ***Critical Tasks***

- 1776 ▪ Memory analysis
- 1777 ▪ Network connection analysis
- 1778 ▪ Timelining
- 1779 ▪ File system triage analysis.

1780 **Cyber Event Correlation**

1781 ***Description***

1782 Cyber event correlation is a capability for an analyst to correlate timeline and log data to create a
1783 comprehensive view of adversary activity during a response. In most cases, behavioral analysis and
1784 baselining will be used to identify anomalous activity that may appear non-malicious, but out of
1785 place, on first inspection. Special attention is paid to how an adversary moves from one system to
1786 other systems and what avenues of exploitation were used. Cyber event correlation typically uses log
1787 files and events from a variety of sources, including physical security sources.

1788 ***Critical Tasks***

- 1789 ▪ Log aggregation
- 1790 ▪ Timelining including physical security correlation when indicated

- 1791
- User behavior profiling.

1792 **Network and Packet Analysis**

1793 *Description*

1794 Network and packet analysis is a capability set for analysts to analyze network traffic patterns,
1795 anomalies, and protocols at a deep level. This capability may start with simple anomaly detection
1796 using network flow or other telemetry data. Analysts will also conduct manual or automated reviews
1797 of packet content and protocol usage to identify anomalous and potentially malicious behavior.

1798 *Critical Tasks*

- 1799
- Protocol-specific knowledge
- 1800
- Network traffic analysis
- 1801
- Anomaly detection
- 1802
- Baselining.

1803 **Malicious Code Analysis**

1804 *Description*

1805 Malicious code analysis reverse engineers and analyzes malicious or potentially malicious code
1806 artifacts. Malicious code analysts are trained in static and dynamic code analysis, malware reverse
1807 engineering, anti-anti-forensics techniques, code de-obfuscation, and machine languages (for
1808 multiple processor sets).

1809 *Critical Tasks*

- 1810
- Dynamic code analysis
- 1811
- Static code analysis
- 1812
- Anti-anti-forensics techniques
- 1813
- Assembly/machine language interpretation (multiple processor sets)
- 1814
- Cryptography
- 1815
- Packet analysis
- 1816
- Operating system internals.

1817 **Wide Scale System Analysis**

1818 *Description*

1819 Wide scale system analysis looks at rudimentary host system telemetry from a breadth of systems to
1820 identify anomalous activity. Wide scale system analysis is distinct from host system forensic analysis
1821 primarily in the number of systems being analyzed. This analysis identifies additional systems
1822 showing indications of adversary presence using behavioral/anomaly detection techniques or
1823 leveraging indicators of compromise derived from other incident-related analysis. Special attention is
1824 paid to how an adversary maintains persistence, leverages access credentials, and further leverages
1825 this to access other systems or resources on the network.

1826 *Critical Tasks*

- 1827
- Frequency analysis
- 1828
- Whitelisting/blacklisting

- 1829 ▪ Anomaly Detection
- 1830 ▪ Memory Triage
- 1831

1832 **Annex I: Acronym List**

1833	CSA	Cybersecurity Advisor
1834	CS&C	(Department of Homeland Security) Office of Cybersecurity and
1835		Communications
1836	CI	Critical Infrastructure
1837	CRG	Cyber Response Group
1838	CTIIC	(Office of the Director of National Intelligence) Cyber Threat Intelligence
1839		Integration Center
1840	DC3	Department of Defense Cyber Crime Center
1841	DHS	Department of Homeland Security
1842	DoD	Department of Defense
1843	DoDIN	Department of Defense Information Network
1844	DOJ	Department of Justice
1845	DOS	Department of State
1846	DSCA	Defense Support of Civil Authorities
1847	ESF	Emergency Support Functions
1848	FBI	(Department of Justice) Federal Bureau of Investigations
1849	FEMA	(Department of Homeland Security) Federal Emergency Management Agency
1850	GCC	Government Coordinating Council
1851	HIS	(Department of Homeland Security) Homeland Security Investigations
1852	IC	Intelligence Community
1853	IC SCC	Intelligence Community Security Coordination Center
1854	ICE	(Department of Homeland Security) Immigrations and Customs Enforcement
1855	ICT	Information and Communications Technology
1856	IP	(Department of Homeland Security) Office of Infrastructure Protection
1857	ISAC	Information Sharing and Analysis Center
1858	ISAO	Information Sharing and Analysis Organization
1859	JOC	Joint Operations Center
1860	LEGATs	(Federal Bureau of Investigations) Legal Attaché offices
1861	MS-ISAC	Multi-State Information Sharing and Analysis Center
1862	NCIRP	National Cyber Incident Response Plan
1863	NCCIC	(Department of Homeland Security) National Cybersecurity and Communications
1864		Integration Center
1865	NCISS	National Cyber Incident Severity Schema
1866	NCIJTF	(Federal Bureau of Investigations) National Cyber Investigative Joint Task Force

1867	NCPA	National Cybersecurity Protection Act
1868	NCTOC	National Security Agency Central Security Service Cybersecurity Threat
1869		Operations Center
1870	NICC	(Department of Homeland Security) National Infrastructure Coordinating Center
1871	NIMS	National Incident Management System
1872	NIST	National Institute of Standards and Technology
1873	NIPP	National Infrastructure Protection Plan
1874	NPS	National Preparedness System
1875	NRF	National Response Framework
1876	NSA/CSS	National Security Agency/Central Security Service
1877	NSC	National Security Council
1878	ODNI	Office of the Director of National Intelligence
1879	PII	Personally Identifiable Information
1880	PSA	Protective Security Advisor
1881	PPD	Presidential Policy Directive
1882	SCC	Sector Coordinating Council
1883	SLTT	State, Local, Tribal, and Territorial
1884	SLTTGCC	State, Local, Tribal, and Territorial Government Coordinating Council
1885	SSA	Sector Specific Agency
1886	UCG	Unified Coordination Group
1887	USCYBERCOM	(Department of Defense) United States Cyber Command
1888	USSS	(Department of Homeland Security) United States Secret Service
1889
